

Australian Standard™

**Supervisory control and data
acquisition (SCADA)—Generic
telecommunications interface and
protocol**

Part 2: Fire alarm systems

This Australian Standard was prepared by Committee IT/24, Supervisory Control and Data Acquisition (SCADA). It was approved on behalf of the Council of Standards Australia on 17 July 2000 and published on 25 September 2000.

The following interests are represented on Committee IT/24:

Association of Consulting Engineers Australia
Australasian Fire Authorities Council
Australasian Railway Association
Australian Communications Authority
Australian Electrical and Electronic Manufacturers Association
Australian Gas Association
Australian Information Industry Association
Australian Pipeline Industry Association
Australian Security Industry Association Limited
Australian Telecommunications Users Group
AUSTROADS
Cable & Wireless Optus Limited
CIGRE AP35
Electricity Supply Association of Australia
Fire Protection Association Australia
Institution of Engineers Australia
Telstra Corporation Limited
Water Services Association of Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Australia web site at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Australian Standard*, has a full listing of revisions and amendments published each month.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.com.au, or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

This Standard was issued in draft form for comment as DR 99199.

PREFACE

This Standard was prepared by the Standards Australia Committee IT/24 on Supervisory Control and Data Acquisition as a revision to AS 4418.2 — 1996.

The objective of this Standard is to provide fire equipment manufacturers and fire alarm monitoring organizations with a telecommunications protocol for connecting fire alarm systems to monitoring centres, in order to achieve system and equipment interoperability. Other industry groups may also find the requirements applicable. The objective of this revision is to enhance interoperability and to add additional features based on practical implementation of the Standard.

This Standard is consistent with requirements developed by IEC and published in IEC 60870, *Telecontrol equipment and systems*, the relevant Parts of which have been issued as Australian Standard, AS 60870 of the same name. This Part has been prepared as one of a possible series of Standards for SCADA applications. AS 4418.1 defines the general requirements, including security and addressing, for SCADA networks and this Part is a specific fire alarm monitoring application. The two Parts should be read in conjunction.

Other applications which could form further Parts of this series of Standards could cover areas such as systems for service utilities, transport and security.

Standards Australia/Standards New Zealand Committee FP/2 on Automatic Fire Detection, Warning and Intercom Systems has prepared a product Standard for alarm signalling equipment designed to utilize this telecommunications protocol, AS 4428.6 *Fire detection, warning, control and intercom systems—Control and indicating equipment Part 6: Alarm signalling equipment*. In addition, Committee FP/2 has prepared a Standard which specifies minimum alarm monitoring network performance parameters which network designers are able to use to ensure adequate performance of monitored fire alarm systems, AS 1670.3 *Fire detection, warning, control and intercom systems — Control and indicating equipment — System design, installation, and commissioning Part 3: Monitoring network performance*.

The term 'informative' has been used in this Standard to define the application of the appendix to which it applies. An 'informative' appendix is only for information and guidance.

CONTENTS

	<i>Page</i>
SECTION 1 SCOPE AND GENERAL	
1.1 SCOPE.....	4
1.2 APPLICATION.....	4
1.3 REFERENCED AND RELATED DOCUMENTS	4
1.4 DEFINITIONS	5
SECTION 2 PROTOCOL STRUCTURE	
2.1 GENERAL	6
SECTION 3 PHYSICAL LAYER	
3.1 SELECTIONS FROM ISO AND ITU-T STANDARDS	7
SECTION 4 LINK LAYER	
4.1 TRANSMISSION FRAME FORMAT	8
4.2 LINK TRANSMISSION PROCEDURES	9
SECTION 5 STRUCTURE OF APPLICATION DATA	
5.1 GENERAL	11
SECTION 6 DEFINITION AND CODING OF APPLICATION INFORMATION ELEMENTS	
6.1 GENERAL	13
6.2 TYPE IDENTIFICATION (Figure 6.1).....	13
6.3 VARIABLE STRUCTURE QUALIFIER (Figure 6.2).....	15
6.4 CAUSE OF TRANSMISSION (Figure 6.3)	16
6.5 ADDRESS OF ALARM SYSTEM DATA TERMINAL EQUIPMENT (Figure 6.4). 18	
6.6 INFORMATION OBJECT ADDRESS (Figure 6.5).....	18
6.7 INFORMATION ELEMENTS.....	19
SECTION 7 DEFINITION AND PRESENTATION OF SPECIFIC ASDUs	
7.1 GENERAL	28
7.2 ASDUs FOR PROCESS INFORMATION IN MONITOR DIRECTION.....	28
7.3 ASDUs FOR PROCESS INFORMATION IN CONTROL DIRECTION	30
7.4 ASDUs FOR SYSTEM INFORMATION IN MONITOR DIRECTION	33
7.5 ASDUs FOR SYSTEM INFORMATION IN CONTROL DIRECTION	36
7.6 ASDUs FOR FILE TRANSFER.....	41
SECTION 8 BASIC APPLICATION FUNCTIONS	
8.1 SELECTIONS FROM AS 60870.5.5	45
SECTION 9 TRANSMISSION PROCEDURES	
9.1 GENERAL	46
9.2 FAS EVENT	46
9.3 DTE POWER ON	47
9.4 ASE EVENT	48
9.5 LINK INTEGRITY CHECKING	49
9.6 NOTIFICATION OF LINK FAILURE	49
APPENDIX A ALARM SYSTEM DATA TERMINAL EQUIPMENT (DTE) FUNCTIONALITY.....	50
