

AS 60870.1.1—1998
IEC 60870-1-1:1988

Australian Standard[®]

Telecontrol equipment and systems

**Part 1.1: General considerations—
General principles**

[IEC title: Telecontrol equipment and systems, Part 1: General considerations, Section One — General principles]

This Australian Standard was prepared by Committee IT/24, Supervisory Control and Data Acquisition. It was approved on behalf of the Council of Standards Australia on 23 September 1997 and published on 5 January 1998.

The following interests are represented on Committee IT/24:

Association of Consulting Engineers Australia
AUSTEL
Australasian Railway Association
Australian Electrical and Electronic Manufacturers Association
Australian Fire Authorities Council
Australian Gas Association
Australian Pipeline Industry Association
Australian Security Industry Association
AUSTROADS
CIGRE AP35
Electricity Supply Association of Australia
Fire Protection Association of Australia
Institution of Engineers Australia
Telstra Corporation
Water Services Association of Australia

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This Standard was issued in draft form for comment as DR 97093.

PREFACE

This Standard was prepared by the Standards Australia Committee IT/24, Supervisory Control and Data Acquisition.

The Standard is identical with and has been reproduced from IEC 60870-1-1:1988, *Telecontrol equipment and systems, Part 1: General considerations, Section One—General principles*.

IEC has decided to apply a new numbering system, the 60000 series, to all its existing and future publications, including amendments to existing Standards. As a consequence, IEC has modified the bibliographic references in its databases to accord with the new numbering system. All IEC publications issued since the beginning of 1997 will carry references in terms of the 60000 series numbering. Publications printed earlier than 1997 will continue to carry the old series of numbers. For example, a reference to the IEC 60870 series of Standards will be to IEC 870 if the current edition of the Standard was printed prior to 1997.

This Standard is identical to a pre-1997 document; therefore, it uses the old series of numbers.

The objective of this Standard is to provide manufacturers and users of telecontrol equipment and systems with an explanation of their structural elements, configurations and basic functions in order to provide an introduction to the more detailed standards of the series to be adopted in Australia.

As this Standard is reproduced from an international Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text 'this International Standard' should read 'this Australian Standard'.
- (c) A full point substitutes for a comma when referring to a decimal marker.

© Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

CONTENTS

	<i>Page</i>
INTRODUCTION	iv
 Clause	
1. Scope	1
2. Object	1
3. General aspects related to telecontrol systems	3
3.1 The role of telecontrol systems in power systems operation	3
3.2 The role of the data transmission system	4
3.3 Requirements which determine the design of a telecontrol system	5
3.4 Main differences between telecontrol systems and local control systems	5
4. Structures and configurations of telecontrol systems	6
4.1 Interrelation of process network architectures and telecontrol system configurations	6
4.2 Basic functional modules of a point-to-point telecontrol system	7
4.3 Functional software modules	7
4.4 Configuration of telecontrol systems	7
5. Functions of telecontrol systems	10
5.1 Layered structure of telecontrol functions	10
5.2 Application functions	11
5.3 Operational processing functions	12
5.4 Presentation of the process information to the operator	13
6. Transmission of telecontrol data	14
6.1 The role of data transmission standards	14
6.2 Data transport, network, link and physical transmission functions	15
6.3 Characteristics of telecontrol data transmission	15
6.4 Types of traffic in transmission channels	18
6.5 Telecommunication systems	18
6.6 Protection of messages against noise on the transmission channel	19
