Australian/New Zealand Standard™

Electrical hazards on metallic pipelines

AS/NZS 4853:2012

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee EL-001, Wiring Rules. It was approved on behalf of the Council of Standards Australia on 23 February 2012 and on behalf of the Council of Standards New Zealand on 8 March 2012.

This Standard was published on 21 March 2012.

The following are represented on Committee EL-001:

Association of Consulting Engineers Australia

Australian Building Codes Board

Australian Industry Group

Communications, Electrical and Plumbing Union

Consumers' Federation of Australia

Electrical and Communications Association, Old

Electrical Contractors Association of New Zealand

Electrical Regulatory Authorities Council

Electrical Safety Organisation, New Zealand

ElectroComms and Energy Utilities Industries Skills Council

Energy Networks Australia

Engineers Australia

Institute of Electrical Inspectors

Ministry of Economic Development, New Zealand

National Electrical and Communications Association

New Zealand Council of Elders

New Zealand Electrical Institute

New Zealand Manufacturers and Exporters Association

Telstra Corporation

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover

This Standard was issued in draft form for comment as DR AS/NZS 4853.

AS/NZS 4853:2012

Australian/New Zealand Standard™

Electrical hazards on metallic pipelines

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL-001, Wiring Rules, to supersede AS/NZS 4853:2000.

This revision was prepared to address experience gained with the implementation of AS/NZS 4853:2000.

This revision is a general revision of the Standard and introduces a risk based design approach to address electric shock hazard situations and respective mitigation methods.

The significant changes in this revision include—

- (a) the Standard has been restructured to improve its clarity;
- (b) a structured process to assess the likelihood of an electrical hazard being present on a metallic pipeline, and the methodology by which the risk level associated with the hazard is calculated, and the effectiveness of methods to reduce the risk to an acceptable or in the ALARP region to a tolerable level is provided;
- (c) a safety management methodology to document the assessment and control of electrical hazards is introduced, together with requirements for these to be reviewed at defined intervals to assure the ongoing effectiveness of the control; and
- (d) the appendices are revised and expanded.

This Standard has adopted the risk based assessment criteria developed by Energy Networks Australia and Electrical Engineers Association (New Zealand) to align the safety requirements of this Standard with those of the electrical power industry.

Symbols used in equations in this Standard are defined in relation to the particular equations in which they occur.

The term 'informative' has been used in this Standard to define the application of the appendix to which it applies. An 'informative' appendix is only for information and guidance.

Statements expressed in mandatory terms in notes to tables are deemed to be requirements of this Standard.
