## Australian Standard<sup>™</sup>

## Non-destructive testing—Ultrasonic testing of ferritic steel castings

This Australian Standard was prepared by Committee MT/7, Non-destructive Testing of Metals and Materials. It was approved on behalf of the Council of Standards Australia on 16 June 2000 and published on 6 November 2000.

The following interests are represented on Committee MT/7:

Australasian Railway Association

Australian Aerospace Non-Destructive Testing Committee

Australian Industry Group

Australian Institute for Non-Destructive Testing

Australian Nuclear Science & Technology Organization

Australian Pipeline Industry Association

Bureau of Steel Manufacturers of Australia

Industrial Research Limited, New Zealand

Institution of Engineers, Australia

National Association of Testing Authorities, Australia

New Zealand Non-Destructive Testing Association

Society of Automotive Engineers — Australasia

Test Safe Australia

Victorian WorkCover Authority

Additional interests participating in the preparation of this Standard:

Division of Telecommunications and Industrial Physics, CSIRO

Foundries

**Testing Companies** 

#### **Keeping Standards up-to-date**

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Australia web site at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Australian Standard*, has a full listing of revisions and amendments published each month.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.com.au, or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

This Standard was issued in draft form for comment as DR 98197.

### PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee MT/7, Non-destructive Testing of Metals and Materials, to supersede AS 2574—1982, Non-destructive testing—Ultrasonic testing of steel castings and classification of quality.

The objective of this revision is to upgrade the requirements for the A-scan ultrasonic testing of ferritic steel castings that are 15 mm or greater in thickness.

During this revision, cognizance was taken of the following Standards:

ASTM A 609-91 Practice for castings, carbon, low-alloy, and martensitic stainless steel, ultrasonic examination thereof.

BS 6208:1990 Ultrasonic testing of ferritic steel castings including quality levels.

Currently there are no International Standards (ISO) published on the subject.

Statements expressed in mandatory terms in notes to tables and figures are deemed to be requirements of this Standard.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendix to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance.

### CONTENTS

		Page
FOREW	'ORD	5
SECTIO	N 1 SCOPE AND GENERAL	
11	SCOPE AND APPLICATION	6
1.1	REFERENCED DOCUMENTS	6
