CISPR 16-2:1999

AS/NZS CISPR 16.2

Australian/New Zealand Standard™

**Specification for radio disturbance and
immunity measuring apparatus and
methods**

**Part 2: Methods of measurement of
disturbance and immunity**

AS/NZS CISPR 16.2:2002

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TE-003, Electromagnetic Interference. It was approved on behalf of the Council of Standards Australia on 23 August 2002 and on behalf of the Council of Standards New Zealand on 20 August 2002. It was published on 18 September 2002.

The following are represented on Committee TE-003:

Australian Broadcasting Authority
Australian Chamber of Commerce and Industry
Australian Communications Authority
Australian Competent Bodies Association Secretariat
Australian Electrical and Electronic Manufacturers Association
Australian Information Industry Association
Australian Subscription Television and Radio Association
Cable & Wireless Optus
Commonwealth Scientific and Industrial Research Organisation
Consumer Electronics Suppliers Association
Department of Defence, Australia
Electrical Compliance Testing Association
Federation of Australian Commercial TV Stations
Institution of Engineers Australia
Ministry of Economic Development, New Zealand
Society of Automotive Engineers, Australia
Telstra Corporation
The IREE Society
Wireless Institute Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Australia web site at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia International or Standards New Zealand at the address shown on the back cover.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TE-003, Electromagnetic Interference. It supersedes AS/NZS 1052.2:1999, *Specification for radio disturbance and immunity measuring apparatus and methods—Methods of measurement of disturbances and immunity*.

The objective of this Standard is to specify the methods of measurement of EMC phenomena in the frequency range 9 kHz to 18 GHz. It deals with disturbance measurements and immunity measurements.

This Standard is identical with, and has been reproduced, from CISPR 16-2:1999-08 Ed 1.1, *Specification for radio disturbance and immunity measuring apparatus and methods*, Part 2: *Methods of measuring disturbance and immunity*. This consolidated version of CISPR 16-2 is based on the first edition published in 1996 (documents CISPR/A(CO)66+73+74, CISPR/A/260/RVD and CISPR/A(CO)85+86) and its Amendment 1:1999 (documents CISPR/A/241/FDIS and CISPR/A/249/RVD).

It bears the edition number 1.1.

A vertical line in the margin shows where the base publication has been modified by Amendment 1.

The CISPR publication is expected to be amended in the future as dictated by experience gained from its use.

This standard should be read in conjunction with AS/NZS CISPR 16.1.

In this Standard, the following print types are used:

- requirements proper: in arial type;
- *test specifications: in italic type;*
- explanatory matter: in smaller arial type.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘this standard’ should read ‘this Australian/New Zealand Standard’.
- (c) A full point should be substituted for a comma when referring to a decimal marker.

The term ‘informative’ has been used in this Standard to define the application of the annex to which it applies. An ‘informative’ annex is only for information and guidance.

CONTENTS

Clause	Page
SECTION 1: GENERAL	
1.1 Scope	1
1.2 Normative references	1
1.3 Definitions	2
SECTION 2: DISTURBANCE MEASUREMENTS	
2.1 Types of disturbance to be measured	4
2.2 Connection of measuring equipment	5
2.3 General measurement requirements and conditions	6
2.4 Measurement of disturbances conducted along leads, 9 kHz to 30 MHz	9
2.5 Measurements using the absorbing clamp, 30 MHz to 1 000 MHz	23
2.6 Measurement of radiated disturbances	24
SECTION 3: IMMUNITY MEASUREMENTS	
3.1 Immunity test criteria and general measurement procedures	33
3.2 Method of measurement of immunity for conducted signals	36
3.3 Method of measurement of immunity to radiated electric field interference	37
SECTION 4: AUTOMATED MEASUREMENTS	
4.1 Automated measurements	44
SECTION 5: FACTORS INFLUENCING MEASUREMENT ACCURACY	
5.1 Factors influencing measurement accuracy	44
Figures	
Figure 1 Test configuration: table-top equipment for conducted disturbance measurements on power mains (see 2.4.4.1 and 2.4.4.2)	45
Figure 2 Optional test configuration for an EUT with only a power cord attached (see 2.4.4.1)	46
Figure 3 Test configuration: floor-standing equipment (see 2.4.4.1 and 2.4.5.2.2)	47
Figure 4 Test configuration: floor-standing and table-top equipment (see 2.4.4.1 and 2.4.5.2.2)	48
Figure 5 Schematic of conducted disturbance voltage test configuration (see 2.4.4.1 and 2.4.5.2.2)	49
Figure 6 Equivalent circuit for measurement of common mode disturbance voltage for Class I (grounded) EUT (see 2.4.4.2.1)	50
Figure 7 Equivalent circuit for measurement of common mode disturbance voltage for Class II (grounded) EUT (see 2.4.4.2.2)	51
Figure 8 RC element for artificial hand (see 2.4.4.2.3)	52
