

Technical Specification

Adjustable speed electrical power drive systems

Part 8: Specification of voltage on the power interface

This Australian Technical Specification was prepared by Committee EL-027, Power Electronics. It was approved on behalf of the Council of Standards Australia on 24 May 2013. This Technical Specification was published on 5 August 2013.

The following are represented on Committee EL-027:

- Australian Communications and Media Authority
 - Australian Industry Group
 - Bureau of Steel Manufacturers of Australia
 - Engineers Australia
 - RMIT University
-

This Technical Specification was issued in draft form for comment as DR TS IEC 61800.8.

Standards Australia wishes to acknowledge the participation of the expert individuals that contributed to the development of this Technical Specification through their representation on the Committee and through the public comment period.

Keeping Standards up-to-date

Australian Standards® are living documents that reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued.

Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments that may have been published since the Standard was published.

Detailed information about Australian Standards, drafts, amendments and new projects can be found by visiting www.standards.org.au

Standards Australia welcomes suggestions for improvements, and encourages readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.org.au, or write to Standards Australia, GPO Box 476, Sydney, NSW 2001.

PREFACE

This Technical Specification was prepared by the Standards Australia Committee EL-027, Power Electronics.

The objective of this Technical Specification is to provide guidelines for the determination of voltage on the power interface of Power Drive Systems (PDSs).

This Technical Specification is identical with, and has been reproduced from IEC/TS 61800-8, Ed. 1.0 (2010), *Adjustable speed electrical power drive systems—Part 8: Specification of voltage on the power interface*.

Attention is drawn to the fact that this publication is an adoption of an IEC Technical Specification. While the main task of IEC technical committees is to prepare International Standards, in exceptional circumstances, a technical committee may propose the publication of a technical specification when—

- (a) the required support cannot be obtained for the publication of an International Standard, despite repeated efforts; or
- (b) the subject is still under technical development or where, for any other reason, there is the future but no immediate possibility of an agreement on an International Standard.

In IEC, Technical Specifications are subject to review within three years of publication to decide whether they can be transformed into International Standards.

As this Technical Specification is reproduced from an International Technical Specification, the following applies:

- (i) In the source text ‘this part of IEC 61800’ should read ‘this Technical Specification’.
- (ii) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

<i>Reference to International Standard</i>		<i>Australian/New Zealand Standard</i>	
IEC		AS/NZS	
61000	Electromagnetic compatibility (EMC)	61000	Electromagnetic compatibility (EMC)
61000-2-4	Part 2-4: Environment—Compatibility levels in industrial plants for low-frequency conducted disturbances	61000.2.4	Part 2.4: Environment—Compatibility levels in industrial plants for low-frequency conducted disturbances

The term ‘informative’ has been used in this Technical Specification to define the application of the annex to which it applies. An ‘informative’ annex is only for information and guidance.

CONTENTS

1	Scope.....	9
2	Normative references	9
3	Overview and terms and definitions	9
3.1	Overview of the system	9
3.2	Terms and definitions	10
4	System approach.....	15
4.1	General.....	15
4.2	High frequency grounding performance and topology	15
4.3	Two-port approach	15
4.3.1	Amplifying element	16
4.3.2	Adding element	16
4.4	Differential mode and common mode systems.....	16
4.4.1	General	16
4.4.2	Differential mode system	18
4.4.3	Common mode system	19
5	Line section.....	21
5.1	General.....	21
5.2	TN-Type of power supply system.....	21
5.2.1	General	21
5.2.2	Star point grounding and corner grounding	21
5.3	IT-Type of power supply system	22
5.4	Resulting amplification factors in the differential mode model of the line section	22
5.5	Resulting contribution of the line section in the common mode model.....	22
6	Input converter section	23
6.1	Analysis of voltages origins	23
6.1.1	The DC link voltage of converter section (V_d)	23
6.1.2	The reference potential of NP of the DC link voltage.....	23
6.2	Indirect converter of the voltage source type, with single phase diode rectifier as line side converter.....	23
6.2.1	Voltage source inverter (VSI) with single phase diode rectifier.....	23
6.3	Indirect converter of the voltage source type, with three phase diode rectifier as line side converter	26
6.3.1	Voltage source inverter (VSI) with three phase diode rectifier	26
6.4	Indirect converter of the voltage source type, with three phase active line side converter	30
6.4.1	Voltage source inverter (VSI) with three phase active infeed converter	30
6.5	Resulting input converter section voltage reference potential	31
6.6	Grounding	32
6.7	Multipulse application.....	32
6.8	Resulting amplification factors in the differential mode model of the rectifier section	32
6.9	Resulting amplification factors in the common mode model of the rectifier section	33
7	Output converter section (inverter section)	33
7.1	General.....	33
