AS/NZS 61000.4.8

Australian/New Zealand Standard™

Electromagnetic compatibility (EMC)

**Part 4.8: Testing and measurement
techniques—Power frequency magnetic
field immunity test**

AS/NZS 61000.4.8:2002

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TE-003, Electromagnetic Interference. It was approved on behalf of the Council of Standards Australia on 23 August 2002 and on behalf of the Council of Standards New Zealand on 20 August 2002. It was published on 1 November 2002.

The following are represented on Committee TE-003:

Australian Broadcasting Authority
Australian Chamber of Commerce and Industry
Australian Communications Authority
Australian Competent Bodies Association Secretariat
Australian Electrical and Electronic Manufacturers Association
Australian Information Industry Association
Australian Subscription Television and Radio Association
Cable & Wireless Optus
Commonwealth Scientific and Industrial Research Organization
Consumer Electronics Suppliers Association
Department of Defence, Australia
Electrical Compliance Testing Association
Federation of Australian Commercial TV Stations
Institution of Engineers, Australia
Ministry of Economic Development, New Zealand
Society of Automotive Engineers, Australia
Telstra Corporation
The IREE Society
Wireless Institute Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Australia web site at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia International or Standards New Zealand at the address shown on the back cover.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TE-003, Electromagnetic Interference.

The objective of this Standard is to determine the immunity requirements of equipment, only under operational conditions, to magnetic disturbances at power frequency related to residential and commercial locations, industrial installations and power plants, and medium voltage and high voltage sub-stations.

This Standard is identical with and has been reproduced from IEC 61000-4-8:2001, *Electromagnetic compatibility (EMC), Part 4-8: Testing and measurement techniques—Power frequency magnetic field immunity test* (consolidated version).

The consolidated version of IEC 61000-4-8 is based on the first edition published in 1993 (documents 77B(CO)7 and 77B(CO)13) and its Amendment 1:2000 (documents 77B/291+293/FDIS and 77B/298+300/RVD).

The international committee has decided that the contents of the base publication and its amendment will remain unchanged until 2002. At this date, the publication will be—

- (a) reconfirmed; or
- (b) withdrawn; or
- (c) replaced by a revised edition; or
- (d) amended.

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the annex to which they apply. A ‘normative’ annex is an integral part of a Standard, whereas an ‘informative’ annex is only for information and guidance.

In this Standard, the following print types are used:

- requirements proper: in arial type;
- *test specifications: in italic type;*
- explanatory matter: in smaller arial type.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘this standard’ should read ‘this Australian/New Zealand Standard’.
- (c) A full point should be substituted for a comma when referring to a decimal marker.

CONTENTS

	<i>Page</i>
Clause	
1 Scope.....	1
2 Normative references	2
3 General	2
4 Definitions	2
5 Test levels.....	3
6 Test equipment.....	4
6.1 Test generator	4
6.2 Induction coil	5
6.3 Test and auxiliary instrumentation.....	7
7 Test set-up	7
7.1 Ground (reference) plane.....	7
7.2 Equipment under test.....	8
7.3 Test generator	8
7.4 Induction coil	8
8 Test procedure	9
8.1 Laboratory reference conditions.....	9
8.2 Carrying out the test	9
9 Evaluation of test results	10
10 Test report.....	11
Annexes	
Annex A (normative) Induction coil calibration method	15
Annex B (normative) Characteristics of the induction coils	16
Annex C (informative) Selection of the test levels	22
Annex D (informative) Information on power frequency magnetic field strength	24
Figures	
Figure 1 Example of application of the test field by the immersion method.....	11
Figure 2 Schematic circuit of the test generator for power frequency magnetic field	12
Figure 3 Example of test set-up for table-top equipment	12
Figure 4 Example of test set-up for floor-standing equipment	13
Figure 5 Example of investigation of susceptibility to magnetic field by the proximity method	13
Figure 6 Illustration of Helmholtz coils	14
Figure B.1 Characteristics of the field generated by a square induction coil (1 m side) in its plane.....	17
Figure B.2 3 dB area of the field generated by a square induction coil (1 m side) in its plane.....	18
