AS/NZS 61000.4.8:2002 IEC 61000-4-8:2001

Australian/New Zealand Standard[™]

Electromagnetic compatibility (EMC)

Part 4.8: Testing and measurement techniques—Power frequency magnetic field immunity test

AS/NZS 61000.4.8:2002 This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TE-003, Electromagnetic Interference. It was approved on behalf of the Council of Standards Australia on 23 August 2002 and on behalf of the Council of Standards New Zealand on 20 August 2002. It was published on 1 November 2002.

The following are represented on Committee TE-003:

Australian Broadcasting Authority Australian Chamber of Commerce and Industry Australian Communications Authority Australian Competent Bodies Association Secretariat Australian Electrical and Electronic Manufacturers Association Australian Information Industry Association Australian Subscription Television and Radio Association Cable & Wireless Optus Commonwealth Scientific and Industrial Research Organization **Consumer Electronics Suppliers Association** Department of Defence, Australia Electrical Compliance Testing Association Federation of Australian Commercial TV Stations Institution of Engineers, Australia Ministry of Economic Development, New Zealand Society of Automotive Engineers, Australia Telstra Corporation The IREE Society Wireless Institute Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Australia web site at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia International or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR 01361.

Australian/New Zealand Standard[™]

Electromagnetic compatibility (EMC)

Part 4.8: Testing and measurement techniques—Power frequency magnetic field immunity test

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TE-003, Electromagnetic Interference.

The objective of this Standard is to determine the immunity requirements of equipment, only under operational conditions, to magnetic disturbances at power frequency related to residential and commercial locations, industrial installations and power plants, and medium voltage and high voltage sub-stations.

This Standard is identical with and has been reproduced from IEC 61000-4-8:2001, *Electromagnetic* compatibility (EMC), Part 4-8: Testing and measurement techniques—Power frequency magnetic field immunity test (consolidated version).

The consolidated version of IEC 61000-4-8 is based on the first edition published in 1993 (documents 77B(CO)7 and 77B(CO)13) and its Amendment 1:2000 (documents 77B/291+293/FDIS and 77B/298+300/RVD).

The international committee has decided that the contents of the base publication and its amendment will remain unchanged until 2002. At this date, the publication will be—

- (a) reconfirmed; or
- (b) withdrawn; or
- (c) replaced by a revised edition; or
- (d) amended.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the annex to which they apply. A 'normative' annex is an integral part of a Standard, whereas an 'informative' annex is only for information and guidance.

In this Standard, the following print types are used:

- requirements proper: in arial type;
- test specifications: in italic type;
- explanatory matter: in smaller arial type.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text 'this standard' should read 'this Australian/New Zealand Standard'.
- (c) A full point should be substituted for a comma when referring to a decimal marker.

CONTENTS

Clause

Page

1	Scope	1	
2	Normative references		
3	General		
4	Definitions		
5	Test levels		
6	Test equipment	4	
	6.1 Test generator	4	
	6.2 Induction coil	5	
	6.3 Test and auxiliary instrumentation	7	
7	Test set-up	7	
	7.1 Ground (reference) plane	7	
	7.2 Equipment under test	8	
	7.3 Test generator	8	
	7.4 Induction coil	8	
8	Test procedure		
	8.1 Laboratory reference conditions	9	
	8.2 Carrying out the test	9	
9	Evaluation of test results1	0	
10	Test report1	1	

Annexes

Annex A (normative)	Induction coil calibration method	.15
Annex B (normative)	Characteristics of the induction coils	.16
Annex C (informative)) Selection of the test levels	.22
Annex D (informative)	Information on power frequency magnetic field strength	.24

Figures

Figure 1	Example of application of the test field by the immersion method	11
Figure 2	Schematic circuit of the test generator for power frequency magnetic field	12
Figure 3	Example of test set-up for table-top equipment	12
Figure 4	Example of test set-up for floor-standing equipment	13
Figure 5	Example of investigation of susceptibility to magnetic field by the proximity method	13
Figure 6	Illustration of Helmholtz coils	14
Figure B.1	Characteristics of the field generated by a square induction coil (1 m side) in its plane	17
Figure B.2	3 dB area of the field generated by a square induction coil (1 m side) in its plane	18
