

AS 1684.1—1999 *Residential timber-framed construction*

Part 1

Design criteria

(Incorporating Amendment No. 1)

Standards Australia

This Australian Standard was prepared by Committee TM/1, Timber Structures. It was approved on behalf of the Council of Standards Australia on 10 October 1999 and published on 5 December 1999.

The following interests are represented on Committee TM/1:

Australian Building Codes Board
Australian Timber Importers' Federation
Building Research Association of New Zealand
CSIRO, Building, Construction and Engineering
Curtin University of Technology
Institution of Engineers, Australia
Master Builders Australia
Monash University
New Zealand Forest Research Institute
New Zealand Timber Industry Federation
New Zealand Timber Suppliers Group
Pine Australia
Plywood Association of Australia
Queensland Forestry Research Institute
Timber Research and Development Advisory Council of Queensland
University of Technology, Sydney

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Australia web site at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Australian Standard*, has a full listing of revisions and amendments published each month.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.com.au, or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TM/1, Timber Structures.

This Standard incorporates Amendment No. 1 (February 2002). The changes required by the Amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure, or part thereof affected.

This Standard is the result of a consensus of representatives on the Joint Committee that it be produced as an Australian Standard.

The objective of this Standard is to provide users with the design methods, assumptions and other design criteria, which have been used in the preparation of the Span Tables, uplift forces and racking pressures contained within AS 1684.2, AS 1684.3 and AS 1684.4.

Continued development of timber framing systems and the need to cater for a widening variety of materials and design conditions have led to a total revision of structural framing design. These developments include —

- (a) provision for limit state design methods;
- (b) revised/new structural grades for timber;
- (c) provisions catering for open plan living—larger spans, wider openings and bigger rooms, which need a more rational approach to bracing design;
- (d) special ‘engineered’ and fabricated timber products;
- (e) recognition of a wider range of high wind and cyclonic design; and
- (f) computer-aided design software for member sizes, bracing and tie-down.

This Standard is a companion publication to the following:

AS	
1684	Residential timber-framed construction
1684.2	Part 2 Non-cyclonic areas
1684.3	Part 3 Cyclonic areas
1684.4	Part 4 Simplified—Non-cyclonic areas

The term ‘normative’ has been used in this Standard to define the application of the appendix to which it applies, A ‘normative’ appendix is an integral part of a Standard.

CONTENTS

Page

SECTION 1 SCOPE AND GENERAL

1.1	SCOPE AND APPLICATION	4
1.2	REFERENCED DOCUMENTS	4
1.3	OTHER METHODS	5
1.4	BASIS FOR DESIGN	5
1.5	DEFINITIONS	7
1.6	NOTATION	8

SECTION 2 DESIGN OF ROOF MEMBERS

2.1	ROOF BATTENS	10
2.2	RAFTERS	15
2.3	ROOF BEAMS—RIDGE OR INTERMEDIATE BEAMS	21
2.4	UNDERPURLINS	26
2.5	STRUTTING BEAMS	31
2.6	COUNTER STRUTTING BEAMS	35
2.7	COMBINED HANGING STRUTTING BEAMS	39
2.8	CEILING BATTENS	43
2.9	CEILING JOISTS	46
2.10	HANGING BEAMS	50
2.11	COUNTER BEAMS	54
2.12	VERANDAH BEAMS	58

SECTION 3 DESIGN OF WALL MEMBERS

3.1	POSTS	63
3.2	LOADBEARING WALL STUDS	66
3.3	WALL PLATES FOR LOADBEARING WALLS	74
3.4	LINTELS	80

SECTION 4 DESIGN OF FLOOR MEMBERS

4.1	FLOOR JOISTS	88
4.2	BEARERS	93

A1 | SECTION 5 DETERMINATION OF UPLIFT FORCES

5.1	SCOPE AND GENERAL	99
5.2	DETERMINATION OF NET UPLIFT PRESSURES	99

SECTION 6 PRESSURES FOR DETERMINATION OF RACKING FORCES

6.1	SCOPE AND GENERAL	104
6.2	EQUIVALENT PRESSURES ON PROJECTED AREAS	106

APPENDICES

A	CHARACTERISTIC BEAM SHEAR STRENGTHS FOR F-GRADES	110
B	WIND CLASSIFICATIONS AND DYNAMIC GUST PRESSURES	111
C	DESIGN OF OVERHANGS FOR PARALLEL BIRDSMOUTH NOTCHED RAFTERS	112
