Australian Standard®

Electrical equipment for explosive atmospheres — Explosion-protection techniques

Part 6: Increased safety

This Australian Standard was prepared by Committee EL/14, Electrical Equipment in Hazardous Areas. It was approved on behalf of the Council of the Standards Association of Australia on 11 August 1988 and published on 3 October 1988.

The following interest are represented on Committee EL/14:

Australian Coal Association Australian Electrical and Electronic Manufacturers Association Australian Institute of Petroleum Confederation of Australian Industry Department of Defence (Commonwealth) Department of Industrial Relations and Employment, N.S.W. Department of Labour, Vic. Department of Mineral Resources, N.S.W. Department of Mines, Qld Electrical Contractors Associations of Australia Electricity Supply Association of Australia Institute of Instrumentation and Control Insurance Council of Australia Regulatory authorities (electrical) Testing interests

This Standard was issued in draft form for comment as DR 80041.

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

Australian Standard®

Electrical equipment for explosive atmospheres — Explosion-protection techniques

Part 6: Increased safety

First published as AS 1593—1974. Second edition 1982. Revised and redesignated AS 2380.6—1988.

PUBLISHED BY STANDARDS AUSTRALIA (STANDARDS ASSOCIATION OF AUSTRALIA) 1 THE CRESCENT, HOMEBUSH, NSW 2140

PREFACE

This Standard was prepared by the Association's Committee on Electrical Equipment in Hazardous Areas, to supersede AS 1593-1982, *Electrical equipment for explosive atmospheres* — *Increased safety apparatus* — *Type of protection e.* This Standard is intended for the guidance of manufacturers, users, statutory authorities and associated interests. It is Part 6 of a series of Standards dealing with the explosion-protection of electrical equipment intended for use in hazardous areas.

Increased safety is an explosion-protection technique for electrical equipment in hazardous areas, which can be applied to several different forms of electrical equipment, including cage induction motors, luminaires, handlamps, and instrument transformers.

Equipment complying with this Standard will be suitable for use in a Class I Zone 1 or Zone 2 area.

In its terminology, definitions and general treatment of the subject, this Standard is similar to the following Standards and draft Standards issued by the International Electrotechnical Commission and the European Committee for Electrotechnical Standardization:

IEC 79	Electrical apparatus for explosive gas atmospheres Part 7: Increased safety e
EN 50 019	Electrical apparatus for potentially explosive atmospheres Part 6: Increased safety e
IEC 31C(C.O.)8	Draft revision of IEC publication 79-7

Acknowledgement is made of the assistance received from these sources.

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.
