AS 2467—1981

Australian Standard®

Maintenance of electrical switchgear

The following scientific, industrial and governmental organizations and departments were officially represented on the committee entrusted with the preparation of this standard:

Australian-British Trade Association

Australian Electrical and Electronic Manufacturers Association

Bureau of Steel Manufacturers of Australia

Confederation of Australian Industry

Department of Defence

Department of Productivity, ACT

Electricity Supply Association of Australia

Institution of Engineers, Australia

Railways of Australia Committee

Testing Authorities

This standard prepared by Committees EL/6, Industrial Switchgear and Controlgear and EL/7, Power Switchgear was approved on behalf of the Council of the Standards Association of Australia on 7 April 1981 and was published on 1 July 1981.

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

PREFACE

This standard was prepared as a joint project by the Association's Committee on Industrial Switchgear and Controlgear, and Power Switchgear. It supersedes AS CC9—1965 which was BS CP1008:1958 endorsed as an Australian standard. BS CP1008 was subsequently superseded by BS 5405:1976, Code of Practice for the Maintenance of Electrical Switchgear for Voltages up to and including 145 kV, and acknowledgement is made of the assistance received from that document in the preparation of this standard.

This standard gives basic recommendations for the safety of personnel in proximity to or engaged in maintenance of electrical switchgear and includes detailed recommendations for particular types of switchgear.

This standard sets out a standard of good practice and generally takes the form of recommendations. Compliance with it does not confer immunity from relevant statutory and legal requirements (see Clause 1.3).

This standard may require reference to the following documents:

- AS 1076 Code of Practice for Selection, Installation and Maintenance of Electrical Apparatus and Associated Equipment for Use in Explosive Atmospheres (other than Mining Applications) Part 1 — Basic Requirements
- AS 1255 Methods of Test for Electrical Characteristics of Solid Plastics Insulating Materials Part 4 — Method 4 — Determination of the Permittivity and Dielectric Dissipation Factor at Power, Audio and Radio Frequencies up to 300 MHz
- AS 1265 Bushings for Alternating Voltages above 1000 V

- AS 1270 Hearing Protection Devices
- AS 1319 Rules for the Design and Use of Safety Signs for the Occupational Environment
- AS 1883 Guide to Maintenance and Supervision of Insulating Oils in Service
- AS 1930 Circuit-breakers for Distribution Circuits (up to and including 1000 V a.c. and 1200 V d.c.)
- AS 2006 High-voltage Alternating Current Circuitbreakers
- AS 2067 Switchgear Assemblies and Ancillary Equipment for a.c. Voltages above 1 kV
- AS 2184 Moulded-case Circuit-breakers (up to and including 600 V a.c. and 250 V d.c.) (interrupting Rating 10 kA and more)
- AS 2225 Rubber Gloves for Electrical Purposes
- AS 2290 Maintenance and Overhaul of Electrical Equipment for Coal Mines Part 1—Maintenance of Electrical Equipment for Explosive Atmospheres Part 2—Overhaul of Electrical Equipment for Explosive Atmospheres
- AS 2395 Terminals for Switchgear Assemblies for Alternation Voltages above 1 kV
- AS 3118 Approval and Test Specification for Electric Inspection Handlamps
- AS 3160 Approval and Test Specification for Handheld Portable Electric Tools
- IEC 480 Guide to the Checking of Sulphur Hexafluoride (SF_6) taken from Electrical Equipment

Attention is also drawn to the list of relevant standards given in Appendix F.

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.
