

AS/NZS 3008.1.1:2009
(Incorporating Amendment No. 1)

AS/NZS 3008.1.1:2009

Australian/New Zealand Standard™

**Electrical installations—Selection of
cables**

**Part 1.1: Cables for alternating voltages
up to and including 0.6/1 kV—Typical
Australian installation conditions**

AS/NZS 3008.1.1:2009

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee EL-001, Wiring Rules. It was approved on behalf of the Council of Standards Australia on 14 September 2009 and on behalf of the Council of Standards New Zealand on 2 October 2009.

This Standard was published on 26 October 2009.

The following are represented on Committee EL-001:

- Association of Consulting Engineers Australia
- Australian Building Codes Board
- Australian Industry Group
- Communications, Electrical and Plumbing Union
- Consumers' Federation of Australia
- Electrical and Communications Association (Qld)
- Electrical Contractors Association of New Zealand
- Electrical Regulatory Authorities Council
- Electrical Safety Organisation (New Zealand)
- ElectroComms & Energy Utilities Industries Skills Council
- Energy Networks Australia
- Institute of Electrical Inspectors
- Ministry of Economic Development (New Zealand)
- National Electrical and Communications Association
- New Zealand Council of Elders
- New Zealand Electrical Institute
- Telstra Corporation Limited

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR 06745.

Australian/New Zealand Standard™

Electrical installations—Selection of cables

Part 1.1: Cables for alternating voltages up to and including 0.6/1 kV—Typical Australian installation conditions

Originated in Australia as AS 3008.1—1984.
Second edition 1989.
Jointly revised and redesignated AS/NZS 3008.1.1:1998.
Fourth edition 2009.
Reissued incorporating Amendment No. 1 (August 2011).

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL-001, Wiring Rules, to supersede AS/NZS 3008.1.1:1998, *Electrical installations—Selection of cables*, Part 1.1 *Cables for alternating voltages up to and including 0.6/1 kV—Typical Australian installation conditions*.

This Standard incorporates Amendment No. 1 (August 2011). The changes required by the Amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected.

This Standard is applicable to Australian installation conditions where the nominal ambient air and soil temperatures are 40°C and 25°C, respectively. Part 1.2 is applicable to New Zealand installation conditions where the nominal air and soil temperatures are 30°C and 15°C respectively. Each Part is a complete Standard and requires no reference to the other.

Part 2 will deal with cables for use with alternating voltages over 1 kV.

The objective of the Standard is to specify current-carrying capacity, voltage drop and short-circuit temperature rise of cables, to provide a method of selection for those types of electric cables and methods of installation that are in common use at working voltages up to and including 0.6/1 kV at 50 Hz a.c.

This Standard differs from the 1998 edition as follows:

- (a) The limitations of the installation of thermoplastic insulated cables have been further clarified.
- (b) An explanation has been provided regarding the properties of cross-linked materials at higher temperatures.
- (c) Information has been included on the effect of harmonic currents on balanced three-phase systems, the effect of parallel cables and the effect of electromagnetic interference.
- (d) Ratings for cables with flexible conductors and cables exposed to the sun have been extended in the tables of current-carrying capacities.
- (e) Thermoplastic insulated cables with temperature ratings of 90°C and 105°C have been included in the tables covering current-carrying capacities of cables with 90°C rated cross-linked insulation materials.
- (f) For cables with conductor sizes up to 10 mm² the values of current-carrying capacities for installation in underground wiring enclosures have also been used for the situation of installations 'buried direct'.
- (g) Current-carrying capacities for cables installed in wiring enclosures have been recalculated according to IEC 60287.
- (h) The values for all current-carrying capacities have been expressed to the nearest ampere to align with current IEC practice.
- (i) Additional values for a.c. resistance and three-phase voltage drop have been included for single-core aerial cables with bare or insulated conductors operating at a conductor temperature of 80°C.
- (j) Table headings have been simplified and now listed in an Appendix for ease of reference.

In the preparation of this Standard, reference was made to IEC 60287 and acknowledgment is made of the assistance received from that source.

Statements expressed in mandatory terms in notes to tables and figures are deemed to be requirements of this Standard.

The term ‘informative’ has been used in this Standard to define the application of the appendix to which it applies. An ‘informative’ appendix is only for information and guidance.
