

Australian/New Zealand Standard™

**Auxiliaries for lamps—Capacitors for
use in tubular fluorescent and other
discharge lamp circuits—General
and safety requirements
(IEC 61048:1991, MOD)**

AS/NZS 61048:2002

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee EL-041, Lamps and related equipment. It was approved on behalf of the Council of Standards Australia on 30 July 2002 and on behalf of the Council of Standards New Zealand on 20 June 2002. It was published on 27 August 2002.

The following are represented on Committee EL-041:

Association of Consulting Engineers, Australia
Australian Chamber of Commerce and Industry
Australian Electrical and Electronic Manufacturers Association
Consumer Federation of Australia
Electrical Compliance Testing Association of Australia
Energy Efficiency and Conservation Authority of New Zealand
Illuminating Engineering Society of Australia and New Zealand
Ministry of Economic Development, New Zealand
Electrical Regulatory authorities council (Australia)
International Accreditation of NZ (IANZ)

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Australia web site at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia International or Standards New Zealand at the address shown on the back cover.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL-041, Lamps and related equipment.

In Australia, this Standard will supersede AS 2644—1990, *Capacitors for use in discharge lamp circuits*. AS 2644—1990 will co-exist with AS/NZS 61048 until 31 December 2002 on which date AS 2644 will be withdrawn.

The objective of this Standard is to specify general and safety requirements for continuous rated capacitors up to 2.5 kVAR intended for use in discharge lamp circuits up to 1000 V operating at 50/60 Hz.

This Standard is an adoption with national modifications and is reproduced from IEC 61048:1991, *Auxiliaries for lamps—Capacitors for use in tubular fluorescent and other discharge lamp circuits—General and safety requirements* (including Amendment 1:1995 and Amendment 2:1999 and has been varied as indicated to take account of Australian/New Zealand conditions. IEC Amendments 1 and 2 are identified by numbered marginal bars beside the affected text.

Variations to IEC 61048:1991 are indicated at the appropriate places throughout this Standard. Strikethrough (~~example~~) identifies IEC tables, figures and passages of text which, for the purposes of this Australian/New Zealand Standard, are deleted. Where Australian/New Zealand tables, figures or passages of text are added, each is set in its proper place and identified by shading (**example**). Added figures are not themselves shaded, but are identified by a shaded border.

A reference to an International Standard identified in the Normative References Clause by strikethrough (~~example~~) is replaced by a reference to the Australian or Australian/New Zealand Standard(s) listed immediately thereafter and identified by shading (**example**). Where the struck-through referenced document and the referenced Australian or Australian/New Zealand Standard are identical, this is indicated in parenthesis after the title of the latter.

In this Standard, the following print types are used:

- requirements proper: in arial type;
- *test specifications: in italic type;*
- explanatory matter: in smaller arial type.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘this standard’ should read ‘this Australian/New Zealand Standard’.
- (c) A full point should be substituted for a comma when referring to a decimal marker.

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the annex to which they apply. A ‘normative’ annex is an integral part of a Standard, whereas an ‘informative’ annex is only for information and guidance.

CONTENTS

	<i>Page</i>
SECTION 1 - GENERAL	
1 Scope	1
2 Normative references.....	2
3 Definitions	2
4 General requirements	3
5 General notes on tests.....	5
6 Marking	5
SECTION 2 – SAFETY	
7 Terminations.....	7
8 Creepage distances and clearances	7
9 Voltage rating	8
10 Fuses	8
11 Discharge resistors.....	9
SECTION 3 – TESTS	
12 Testing sequence	10
13 Sealing and heating test	10
14 High-voltage test.....	11
15 Resistance to adverse operating conditions	11
16 Resistance to heat, fire and tracking.....	13
17 Self-healing test.....	15
18 Destruction test	15
Annex A (normative) Test voltage	22
Annex B (normative) Temperature adjustment of test enclosure.....	23
Annex C (informative) Test for conformity of manufacturer.....	24
Annex D (informative) Guide to calculating equipment settings for tests in Clause 15.2 and 18.1.3.....	25
Figure 1 – A.C. conditioning circuit	27
Figure 2 – D.C. conditioning circuit	27
Figure 3 – Self-healing breakdown test equipment.....	27
Figure 4 – Voltage and current waveform from the tests in 15.2 and 18.1.3.....	28
Figure 5 – Typical test circuits for the tests in 15.2 and 18.1.3.....	29
Figure 6 – Summary of test procedure	30
