

AS/NZS 1554.1:1995

Australian/New Zealand Standard[®]

Structural steel welding

Part 1: Welding of steel structures

AS/NZS 1554.1:1995

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee WD/3, Elding of Structures. It was approved on behalf of the Council of Standards Australia on 28 July 1995 and on behalf of the Council of Standards New Zealand on 7 August 1995. It was published on 5 October 1995.

The following interests are represented on Committee WD/3:

Association of Consulting Engineers, Australia
Australian Chamber of Commerce and Industry
Australian Institute of Steel Construction
AUSTROADS
Bureau of Steel Manufacturers of Australia
Electricity Supply Association of Australia
Heavy Engineering Research Association, New Zealand
Institution of Engineers, Australia
Metal Trades Industry Association of Australia
Railways of Australia
Steel Reinforcement Institute of Australia
University of Sydney
Welding Technology Institute of Australia

Review of Standards. To keep abreast of progress in industry, Joint Australian/New Zealand Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Joint Standards and related publications will be found in the Standards Australia and Standards New Zealand Catalogue of Publications; this information is supplemented each month by the magazines 'The Australian Standard' and 'Standards New Zealand', which subscribing members receive, and which give details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Joint Standards, addressed to the head office of either Standards Australia or Standards New Zealand, are welcomed. Notification of any inaccuracy or ambiguity found in a Joint Australian/New Zealand Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

PREFACE

This edition of this Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee WD/3, Welding of Structures, to supersede AS 1554.1—1991, NZS 4701:1981, *Metal arc welding of steel structures* and NZS 4704:1994, *Structural steel welding—Welding of steel structures*.

The objective of this Standard is to provide rules for the welding of a wide range of steel constructions and while it is expected that its main use will be for statically loaded welds, it applies also to some welds subject to fatigue. Although this Standard has been specifically prepared for steel structures, it may be usefully applied to machine frames and other types of steel constructions.

This edition incorporates the following major changes to the 1991 edition:

- (a) The scope has been expanded to provide for steel structures complying with AS 1538, *Cold-formed Steel Structures Code*, AS 4100, *Steel structures* and NZS 3404.1, *Steel structures Standard*.
- (b) Section 3 has been reviewed and updated.
- (c) Table 4.4 has been revised and expanded to include gas-tungsten arc-welding (GTAW).
- (d) Table 4.5.1(A), has been revised to accommodate GTAW consumables.
- (e) Tables 4.5.1(B) and 5.3.4 have been revised to reflect changes in Standards for steels and to accommodate other steel types and New Zealand steels.
- (f) Method for determination of preheating temperature has been revised to allow for the use of heat, ladle or product analyses where available.
- (g) Methods of radiographic examination have been reviewed.
- (h) Necessary changes have been made throughout the Standard to accommodate New Zealand conditions.

The Standard requires that weld preparations, welding consumables and welding procedures be qualified before commencement of welding. Prequalified joint preparations, welding consumables and welding procedures are also given in the Standard.

The Standard, in catering for structures subject to fatigue conditions as well as statically loaded structures, provides two categories of welds with two differing levels of weld quality assurance associated with the different types of service to which the welds are subjected. The intention is that the designer should select the category suited to the severity of the service and nominate this on the drawings; where a structure contains both categories, this will ensure that appropriate levels of supervision and inspection will be applied to the relevant parts of the structure.

Statements expressed in mandatory terms in notes to tables and figures are deemed to be requirements of this Standard.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendix to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance.

CONTENTS

	<i>Page</i>
SECTION 1 SCOPE AND GENERAL	
1.1 SCOPE	5
1.2 INNOVATION	6
1.3 REFERENCED DOCUMENTS	6
1.4 DEFINITIONS	6
1.5 WELD CATEGORIES	6
1.6 BASIC WELDING REQUIREMENTS	7
1.7 SAFETY PRECAUTIONS	7
SECTION 2 MATERIALS OF CONSTRUCTION	
2.1 PARENT MATERIAL	8
2.2 BACKING MATERIAL	8
2.3 WELDING CONSUMABLES	8
SECTION 3 DETAILS OF WELDED CONNECTIONS	
3.1 GENERAL	9
3.2 BUTT WELDS	9
3.3 FILLET WELDS	10
3.4 COMPOUND WELDS	14
3.5 SEAL WELDS	15
3.6 PLUG AND SLOT WELDS	15
3.7 WELDS FOR THE PURPOSE OF COMBINING ROLLED STEEL SECTIONS	15
SECTION 4 QUALIFICATION OF PROCEDURES AND PERSONNEL	
4.1 QUALIFICATION OF WELDING PROCEDURE	17
4.2 METHOD OF QUALIFICATION OF WELDING PROCEDURE	17
4.3 PREQUALIFIED WELDING PROCEDURES	17
4.4 PREQUALIFIED JOINT PREPARATIONS	17
4.5 QUALIFICATION OF WELDING CONSUMABLES	44
4.6 QUALIFICATION OF WELDING PROCEDURE BY TESTING	48
4.7 EXTENSION OF QUALIFICATION	49
4.8 COMBINATION OF PROCESSES	52
4.9 RECORDS OF TESTS	52
4.10 REQUALIFICATION OF WELDING PROCEDURES	52
4.11 QUALIFICATION OF WELDING PERSONNEL	56
SECTION 5 WORKMANSHIP	
5.1 PREPARATION OF EDGES FOR WELDING	57
5.2 ASSEMBLY	57
5.3 PREHEATING AND INTERRUPT CONTROL	58
5.4 WELDING UNDER ADVERSE WEATHER CONDITIONS	59
5.5 TACK WELDS	60
5.6 WELD DEPTH-TO-WIDTH RATIO	60
5.7 CONTROL OF DISTORTION AND RESIDUAL STRESS	63
5.8 REPAIR OF DEFECTS IN WELDS	66
5.9 TEMPORARY ATTACHMENTS	66
