Australian/New Zealand Standard™

**Information technology—Open
distributed processing—Type repository
function**

AS/NZS ISO/IEC 14769:2003

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee IT-015, Software Engineering. It was approved on behalf of the Council of Standards Australia on 1 May 2003 and on behalf of the Council of Standards New Zealand on 22 April 2003. It was published on 4 June 2003.

The following are represented on Committee IT-015:

Australian Computer Society
Australian Information Industry Association
Australian Society for Technical Communication (NSW)
Australian Software Metrics Association
Griffith University
New Zealand Organisation for Quality
Quality Society of Australasia
Software Engineering Australia (Qld)
Software Quality Association (ACT)
Software Quality Association (NSW)
Software Verification Research Centre
Sydney SPIN Group (Software Process Improvement Network)
Systems Engineering Society of Australia
University of New South Wales
University of South Australia
University of Technology, Sydney

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Australia web site at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia International or Standards New Zealand at the address shown on the back cover.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee IT-015, Software Engineering.

This Standard is identical with, and has been reproduced from ISO/IEC 14769:2001, *Information technology—Open distributed processing—Type repository function*.

The objective of this Standard is to provide a method of accessing type description used within open distributed processing systems, where the type descriptions can be in various concrete syntaxes and type languages used in these distributed processing systems.

The terms ‘normative’ and ‘informative’ are used to define the application of the annex to which they apply. A normative annex is an integral part of a standard, whereas an informative annex is only for information and guidance.

As this Standard is reproduced from an international standard, the following applies:

- (a) Its number appears on the cover and title page while the international standard number appears only on the cover.
- (b) In the source text ‘this International Standard’ should read ‘this Australian/New Zealand Standard’.
- (c) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

<i>Reference to International Standard</i>		<i>Australian/New Zealand Standard</i>	
ISO/IEC		AS/NZS	
10027	Information technology—Information resource dictionary system (IRDS) framework	4101	Information technology—Information resource dictionary system framework

14771	Information technology—Open distributed processing—Naming framework	ISO/IEC 14771	Information technology—Open distributed processing—Naming framework

CONTENTS

	<i>Page</i>
1	Scope 1
2	Normative References 1
2.1	Identical Recommendations International Standards..... 1
2.2	Additional References..... 2
2.3	Specifications of the Object Management Group..... 2
3	Definitions 2
3.1	Terms defined in other International Standards..... 2
3.2	Terms defined in this Recommendation International Standard..... 4
3.3	Terms defined in the OMG Meta-Object Facility 5
4	Abbreviations..... 5
5	Overview and Motivation..... 5
5.1	Type Repository 5
5.2	Meta-Object Facility..... 6
6	Enterprise Specification..... 6
6.1	Objective 6
6.2	Type Repository Community 6
6.2.1	Roles..... 6
6.2.2	Behaviour 8
6.2.3	Policies 10
6.3	Federation..... 10
6.4	Correspondences between enterprise specification concepts and the MOF 11
7	Information Specification 11
7.1	Correspondences between information viewpoint concepts and the MOF..... 11
8	Computational Specification..... 12
8.1	Correspondences between computational viewpoint concepts and the MOF..... 12
9	Conformance Statements and Reference Points 12
Annex A	– ODP Type Framework..... 14
A.1	ODP-RM Type System..... 14
A.2	Type System for ODP Trading Function..... 16
A.3	Interface Reference and Binding Type System 17
Annex B	– Suggested type languages 23
Annex C	– Summary of Referenced Material in OMG Meta-Object Facility 24
C.1	Problems arising through reference to the OMG Meta-Object Facility specification 24
C.2	Relationship with the MOF specification 24
