

AS/NZS 2381.1:1999  
(Incorporating Amendment No. 1)

AS/NZS 2381.1

Australian/New Zealand Standard™

**Electrical equipment for explosive  
atmospheres—Selection, installation  
and maintenance**

**Part 1: General requirements**

### **AS/NZS 2381.1:1999**

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee EL-014, Electrical Equipment in Hazardous Areas. It was approved on behalf of the Council of Standards Australia on 18 November 1999 and on behalf of the Council of Standards New Zealand on 22 November 1999. It was published on 5 December 1999.

The following are represented on Committee EL-014:

Association of Consulting Engineers Australia  
Auckland Regional Chamber of Commerce  
Australian Association of Certification Bodies  
Australian Chamber of Commerce and Industry  
Australian Coal Association  
Australian Electrical and Electronic Manufacturers Association  
Australian Gas Association  
Australian Industry Group  
Australian Institute of Petroleum  
Australian Institute of Refrigeration Air Conditioning and Heating  
Department of Mineral Resources, N.S.W.  
Department of Mines and Energy, Qld  
Electricity Supply Association of Australia  
Institute of Electrical Inspectors  
Institute of Instrumentation and Control Australia  
Institution of Engineers Australia  
Ministry of Commerce (New Zealand)  
National Electrical and Communications Association  
New Zealand Association of Marine, Aviation and Power Engineers  
New Zealand Employers and Manufacturers Association  
New Zealand Hazardous Areas Electrical Coordinating Committee  
Regulatory authorities (electrical)  
WorkCover New South Wales

#### **Keeping Standards up-to-date**

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Australia web site at [www.standards.com.au](http://www.standards.com.au) or Standards New Zealand web site at [www.standards.co.nz](http://www.standards.co.nz) and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia International or Standards New Zealand at the address shown on the back cover.

(Incorporating Amendment No. 1)

## Australian/New Zealand Standard™

# **Electrical equipment for explosive atmospheres—Selection, installation and maintenance**

## **Part 1: General requirements**

Originated as AS 1076.1—1977.  
Revised and redesignated AS 2381.1—1991.  
Jointly revised and designated AS/NZS 2381.1:1999.  
Reissued incorporating Amendment No. 1 (March 2003).

## PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL/14, *Electrical Equipment in Hazardous Areas*, to supersede, AS 2381.1—1991. It forms the first part of a series of Standards for the selection, installation and maintenance of electrical equipment for use in areas where flammable materials are generated, processed, handled or stored, and which therefore are potentially hazardous.

*This Standard incorporates Amendment No. 1 (March 2003). The changes required by the Amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected.*

The Joint Committee EL/14 has endorsed the adoption of the IEC 60079 Gases and vapours and IEC 61241 Dusts series of Standards as Joint Australian/New Zealand Standards. In these series of Standards there is no reference to Class I and Class II areas. The different Zones are identified as Zone 0, 1, 2 for explosive gases atmospheres and Zone 20, 21, 22 for explosive dust atmospheres.

Considering that the process of adoption of IEC Standards has started, references to Class I and Class II areas have been removed from this Standard to initiate the alignment with the upcoming adopted Standards.

The presentation of this edition is more relevant to the electrical regulatory structures in Australia and New Zealand.

Significant changes in this edition are as follows:

- (a) Inclusion of the New Zealand requirements and references to allow the application of this Standard in New Zealand.
- (b) Deletion of all references to Class I (gases) and Class II (dusts) areas.
- (c) Inclusion of Zones 20, 21 and 22 to address the zoning of hazardous areas in explosive dust atmospheres.
- (d) Revision and expansion of definitions.
- (e) Addition to Section 1 of a specific clause covering documentation.
- (f) Addition to Section 2 of clauses clarifying the verification of acceptance of electrical equipment and the selection of repaired or existing equipment.
- (g) Revision and expansion of requirements regarding installation of equipment and wiring; addition of a clause addressing specific occupancies.
- (h) Restructure and expansion of Section 5 covering maintenance.
- (i) Addition of appendices showing the Standards and overseas certifications bodies recognized by regulatory authorities in New Zealand.
- (j) Addition of an appendix containing a report on the dangers from high-intensity light sources in hazardous areas.
- (k) Deletion of the appendix covering marking of explosion-protected equipment (see AS/NZS 60079.0 and AS 2380.1).

A1

This Standard necessarily deals with existing conditions, but it is not intended to discourage invention or to exclude materials, equipment and methods which may be developed in the future. Revisions will be made from time to time in view of such developments and amendments to this edition will be made only where absolutely necessary. It is expected that the next edition will be issued approximately 5 years from the publication date of this edition.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendix to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance.

Statements expressed in mandatory terms in notes to tables and figures are deemed to be requirements of this Standard.
