

AS/NZS 3823.3:2002

AS/NZS 3823.3

Australian/New Zealand Standard™

**Performance of electrical appliances—
Airconditioners and heat pumps**

**Part 3: Calculation of performance for
minimum energy performance standard
(MEPS) requirements**

AS/NZS 3823.3:2002

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee EL-015, Quality and Performance of Household Electrical Appliances. It was approved on behalf of the Council of Standards Australia on 25 June 2002 and on behalf of the Council of Standards New Zealand on 24 July 2002. It was published on 27 August 2002.

The following are represented on Committee EL-015:

Australian Consumers Association
Australian Electrical and Electronic Manufacturers Association
Australian Industry Group
Australian Retail Association
Business New Zealand
Consumer Electronics Suppliers Association
Department of Industrial Relations (Qld)
Electrical Compliance Testing Association
Energy Efficiency and Conservation Authority of New Zealand
New South Wales Ministry of Energy and Utilities
National Appliance and Equipment Energy Efficiency Committee
National Association of Testing Authorities
Office of the Chief Electrical Inspector
Office of the Technical Regulator (S.A.)

Additional interests participating in the preparation of this Standard:

Airconditioning and Refrigeration Equipment Manufacturers Association of Australia
Australian Institute of Refrigeration Air Conditioning and Heating
Institute of Refrigeration Heating and AirConditioning Engineers of New Zealand
Primary Industries and Resources, South Australia
Testing Interests (Australia)

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Australia web site at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia International or Standards New Zealand at the address shown on the back cover.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL-015, Quality and Performance of Household Electrical Equipment

Testing of airconditioners under controlled operating conditions is defined in AS/NZS 3823.1.1, *Performance of electrical appliances—Airconditioners and heat pumps, Part 1.1: Test Methods—Non-ducted airconditioners and heat pumps—Testing and rating for performance*, and AS/NZS 3823.1.2, *Performance of electrical appliances—Airconditioners and heat pumps, Part 1.2: Test Methods—Ducted airconditioners and air-to-air heat pumps—Testing and rating for performance*. Direct assessment of the performance of airconditioner appliances requires access to large capacity calorimeter or psychrometric loop test facilities. As an alternative to physical testing, this Standard defines an assessment procedure for minimum energy performance requirements based on simplified measurements and a simulation model of airconditioner performance. In all cases, test results obtained by physical testing using the procedures defined in AS/NZS 3823.1.1 or AS/NZS 3823.1.2 take precedence over the results obtained by using this Standard. If the simulation methods described in this Standard are not considered applicable to a particular appliance, then that appliance has to be assessed under AS/NZS 3823.1.1 or AS/NZS 3823.1.2.

The procedure defined in this Standard provides a low cost method for assessing airconditioner performance. It may also be used to assess design modifications for appliances that fail the minimum energy performance standard set in AS/NZS 3823.2.

Statements expressed in mandatory terms in notes to tables are deemed to be requirements of this Standard.

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the appendix to which they apply. A ‘normative’ appendix is an integral part of a Standard, whereas an ‘informative’ appendix is only for information and guidance.

CONTENTS

	<i>Page</i>
SECTION 1 SCOPE AND GENERAL	
1.1 SCOPE.....	4
1.2 OBJECTIVE	4
1.3 APPLICATION	5
1.4 REFERENCED DOCUMENTS.....	5
1.5 DEFINITIONS.....	5
1.6 SIMULATION MODEL.....	5
SECTION 2 MEASUREMENT OF APPLIANCE CHARACTERISTICS	
2.1 SCOPE.....	7
2.2 TEST CONDITIONS	7
2.3 MEASUREMENT OF REFRIGERANT CIRCUIT PRESSURE DROP (OPTIONAL).....	7
2.4 MEASUREMENT OF REFRIGERANT CIRCUIT SET POINT CONDITIONS (OPTIONAL).....	7
2.5 AIRFLOW RATE THROUGH THE COILS	8
2.6 COMPRESSOR CHARACTERISTICS	8
2.7 ELECTRICAL POWER CONSUMPTION.....	8
2.8 COIL CHARACTERISTICS	9
SECTION 3 PERFORMANCE ANALYSIS	
3.1 REQUIRED SIMULATION MODEL FEATURES.....	10
3.2 MODEL CHARACTERISTICS	10
APPENDICES	
A FORMAT SHEETS FOR RECORDING REFRIGERANT CIRCUIT OPERATING CONDITIONS OR ACCEPTANCE OF DEFAULT CONDITIONS	12
B FORMAT SHEETS FOR APPLIANCE DEFINITION.....	17
C THE OAK RIDGE HEAT PUMP MODEL	22
D CALCULATION OF HEAT LOSS/GAIN FROM REFRIGERANT LINES	24
