

AS 2896—1991

Australian Standard®

**Medical gas systems—Installation
and testing of non-flammable
medical gas pipeline systems**

This Australian Standard was prepared by Committee HT/4, Medical Gases and Pipeline Services. It was approved on behalf of the Council of Standards Australia on 5 June 1991 and published on 16 September 1991.

The following interests are represented on Committee HT/4:

Association of Consulting Engineers, Australia
Australian Society of Anaesthetists
Building Management Authority, W.A.
Confederation of Australian Industry
Department of Community Services and Health
Department of Health, N.S.W.
Health Department, W.A.
Institute of Hospital Engineering, Australia
Medical Industry Association of Australia
Metal Trades Industry Association of Australia
Public Works Department, N.S.W.
Royal Australasian College of Surgeons
South Australian Department of Housing and Construction
South Australian Health Commission

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up-to-date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

PREFACE

This Standard was prepared by the Standards Australia Committee on Medical Gases and Pipeline Services to supersede AS 2896—1986.

This Standard differs from the 1986 edition in that guidelines for fixed secondary equipment such as pendants and columns are now included, Appendix A has been modified, Figures 1.1, 1.2 and 1.3 have been amended, Table 4.1 has been altered and the use of UPVC pipes for vacuum has been excluded.

In medical establishments it is vital that high safety standards are maintained and also that there is no risk of failure of supply or plant without adequate warning. Thus particular attention is given in this Standard to the following:

- (a) Design of equipment to ensure non-interchangeability between services.
- (b) Use of correct materials, and cleanness of materials.
- (c) Reserve supplies of gas and reserve plant.
- (d) Warning systems for gas failure.
- (e) Testing and commissioning of pipelines, in particular to detect cross-connections.
- (f) Identification of pipelines.

Requirements in this Standard may be used as a guide for piping systems for other non-flammable medical gases and anaesthetic gas scavenging systems but variations in the requirements may be necessary. This Standard will be revised should such a gas come into general use.

Non-flammable medical gas pipeline systems are installed according to all national and local codes and regulations such as building, electrical and safety codes. It should be noted that for installation of a pipeline, a high quality of workmanship and experience is essential. For certain situations, e.g. hyperbaric conditions, special design and performance criteria for pipelines may be required.

Requirements for suction systems are included in this Standard. At this time there are two techniques widely used, namely pipeline vacuum and venturi ejector suction. Each has its particular advantages. This Standard and AS 2120 specify performance and safety aspects to which both should conform. Requirements for a reasonable reserve performance are incorporated in relevant sections of this Standard; further allowances should not be necessary, unless it is intended to extend the pipeline in question in the future. With regard to anaesthetic gas scavenging, currently available evidence suggests that there is no special hazard associated with venting of waste anaesthetic gases into a central suction system.

Many systems in use do not comply with the intent of Clause 3.5 on terminal units. Because the gas specific component of some terminal units can be removed, these units can become a hazard to patients. To obviate this risk it is recommended that panels with multiple terminal outlets be upgraded within 12 months of publication of this Standard, to the intent of Clause 3.5. It is recognized that replacement of single terminal outlet panels is less urgent because of the smaller risk.

A sleeve indexed fitting is given in Figure 3.3 for surgical tool gas. This connection is recommended as it contains a thread, and therefore by its design has a controlled detachment and reduces the risk of 'hose whip'. The use of adaptors with 'quick connect/disconnect' (Schrader) fittings is not advisable.

In the preparation of this Standard, cognizance was taken of ISO 7396—1987, *Non-flammable medical gas pipeline systems*.

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

FOREWORD	5
 SECTION 1 SCOPE AND GENERAL	
1.1 SCOPE	6
1.2 APPLICATION	6
1.3 REFERENCED DOCUMENTS	6
1.4 DEFINITIONS	6
 SECTION 2 SOURCE OF SUPPLY	
2.1 GENERAL	12
2.2 PROVISION IN CASE OF FAILURE OF SUPPLY	12
2.3 CYLINDERS AND CYLINDER VALVES	12
2.4 CYLINDER SUPPLY SYSTEM	12
2.5 REGULATORS	13
2.6 DESIGN OF GAS CONTROL SYSTEMS	13
2.7 PRESSURE SAFETY VALVES	13
2.8 CRYOGENIC SYSTEMS	13
2.9 MEDICAL BREATHING AIR SYSTEM	14
2.10 MEDICAL SUCTION SYSTEMS	16
2.11 LOCATIONS OF SOURCES OF GAS SUPPLY	19
2.12 ENCLOSURES FOR SUPPLY SYSTEMS	19
 SECTION 3 GENERAL REQUIREMENTS	
3.1 WARNING SYSTEMS	21
3.2 MATERIALS	22
3.3 REQUIREMENTS FOR PIPELINES	23
3.4 PIPELINE SHUT-OFF VALVES	25
3.5 TERMINAL UNITS	25
3.6 IDENTIFICATION OF PIPELINES	27
3.7 PRESSURE GAUGES	28
 SECTION 4 INSTALLATION REQUIREMENTS FOR PIPELINES	
4.1 GENERAL	30
4.2 ELECTRICAL SEGREGATION	30
4.3 PROTECTION OF PIPELINES	30
4.4 MEDICAL GAS RISERS	31
4.5 RISERS AND DROPPERS TO TERMINAL UNITS	31
4.6 SLEEVES	31
4.7 CONTACT WITH CORROSIVE MATERIALS	31
4.8 ROUTING	31
4.9 CUTTING INTO EXISTING SYSTEM	31
4.10 INTERCONNECTION	32
4.11 PIPELINE SUPPORTS	32
4.12 COPPER PIPELINE JOINTS	32
4.13 CONNECTION TO EXISTING SYSTEMS	32
4.14 FIXED SECONDARY EQUIPMENT	33
 SECTION 5 TESTING AND CERTIFICATION	
5.1 GENERAL	37
5.2 TESTING BY RESPONSIBLE AUTHORITIES	37
5.3 LABELLING OF TERMINAL UNITS	37
5.4 TESTS AND CHECKS ON PIPELINE BEFORE CONCEALMENT	37
5.5 TESTS AND COMMISSIONING OF THE COMPLETE PIPELINE SYSTEM	38
5.6 FILLING SYSTEM WITH PROPER GAS AND FINAL COMMISSIONING	39
5.7 CERTIFICATION OF SYSTEMS	39
5.8 AS-INSTALLED DRAWINGS	40
