CISPR 16-2:1996

Australian/New Zealand Standard™

**Specification for radio disturbance
and immunity measuring apparatus
and methods**

**Part 2: Methods of measurement
of disturbances and immunity**

AS/NZS 1052.2:1999

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TE/3, Electromagnetic Interference. It was approved on behalf of the Council of Standards Australia on 6 November 1998 and on behalf of the Council of Standards New Zealand on 12 November 1998. It was published on 5 March 1999.

The following interests are represented on Committee TE/3:

Association of Consulting Engineers Australia
Australian Broadcasting Corporation
Australian Chamber of Commerce and Industry
Australian Communications Authority
Australian Electrical and Electronic Manufacturers Association
Australian Information Industry Association
Australian Subscription Television and Radio Association
Commonwealth Scientific and Industrial Research Organization
Consumer Electronics Suppliers Association Australia
Department of Defence (Australia)
Electrical Compliance Testing Association Australia
Federation of Australian Commercial TV Stations
Institution of Engineers Australia
Institution of Radio and Electronics Engineers Australia
International Accreditation New Zealand
Ministry of Commerce New Zealand
National Standards Commission Australia
Optus Communications
Public Transport Corporation Australia
Society of Automotive Engineers—Australasia
Telstra Corporation
Wireless Institute Australia

Review of Standards. To keep abreast of progress in industry, Joint Australian/New Zealand Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Joint Standards and related publications will be found in the Standards Australia and Standards New Zealand Catalogue of Publications; this information is supplemented each month by the magazines 'The Australian Standard' and 'Standards New Zealand', which subscribing members receive, and which give details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Joint Standards, addressed to the head office of either Standards Australia or Standards New Zealand, are welcomed. Notification of any inaccuracy or ambiguity found in a Joint Australian/New Zealand Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TE/3, Electromagnetic Interference, as one of a series of Standards intended to facilitate control of electromagnetic interference and the compatibility of electrical and electronic equipment.

This Standard is identical with and has been reproduced from CISPR 16-2:1996, *Specification for radio disturbance and immunity measuring apparatus and methods, Part 2: Methods of measurement of disturbance and immunity*.

The objective of this Standard is to provide manufacturers, designers and testers of electrical and electronic apparatus with a method of measurement of electromagnetic disturbances and immunity.

Statements expressed in mandatory terms in notes to figures are deemed to be requirements of this Standard.

The term 'informative' has been used in this Standard to define the application of the appendix to which it applies. An 'informative' appendix is only for information and guidance.

As this Standard is reproduced from an International Standard the following applies:

- (a) Its number appears on the cover and title page while the International Standard number appears only on the cover.
- (b) In the source text 'this part of CISPR 16' should read 'this Australian/New Zealand Standard'.
- (c) A full point should be substituted for a comma when referring to a decimal marker.
- (d) In the source text 'radio' should read 'radiocommunication'.

© Copyright – STANDARDS AUSTRALIA/STANDARDS NEW ZEALAND

Users of Standards are reminded that copyright subsists in all Standards Australia and Standards New Zealand publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia or Standards New Zealand may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia or Standards New Zealand. Permission may be conditional on an appropriate royalty payment. Australian requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia. New Zealand requests should be directed to Standards New Zealand.

Up to 10 percent of the technical content pages of a Standard may be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia or Standards New Zealand.

Inclusion of copyright material in computer software programs is also permitted without royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia or Standards New Zealand at any time.

CONTENTS

SECTION 1: GENERAL	
Clause	<i>Page</i>
1.1 Scope	1
1.2 Normative references	1
1.3 Definitions	1
SECTION 2: DISTURBANCE MEASUREMENTS	
2.1 Types of disturbance to be measured	4
2.2 Connection of measuring equipment	4
2.3 General measurement requirements and conditions	5
2.4 Measurement of disturbances conducted along leads, 9 kHz to 30 MHz ..	8
2.5 Measurements using the absorbing clamp, 30 MHz to 1000 MHz	22
2.6 Measurement of radiated disturbances	23
SECTION 3: IMMUNITY MEASUREMENTS	
3.1 Immunity test criteria and general measurement procedures	30
3.2 Method of measurement of immunity for conducted signals	33
3.3 Method of measurement of immunity to radiated electric field interference	34
SECTION 4: AUTOMATED MEASUREMENTS	
4.1 Automated measurements (under consideration)	41
SECTION 5: FACTORS INFLUENCING MEASUREMENT ACCURACY	
5.1 Factors influencing measurement accuracy	41
Figures	42
Annexes	
A Guidelines to connection of electrical equipment to the artificial mains network	63
B Use of spectrum analyzers and scanning receivers	70
C Historical background to the method of measurement of the interference power produced by electrical household and similar appliances in the VHF range	72
