Australian Standard™

Non-destructive testing—Determination of thickness

Part 3: Use of ultrasonic testing

This Australian Standard was prepared by Committee MT-007, Non-destructive Testing of Metal and Materials. It was approved on behalf of the Council of Standards Australia on 20 October 2005.

This Standard was published on 16 November 2005.

The following are represented on Committee MT-007:

Australian Railway Association
Australian Aerospace Non-Destructive Testing Committee
Australian Industry Group
Australian Institute for Non-Destructive Testing
Australian Nuclear Science & Technology Organisation
Australian Pipeline Industry Association
Bureau of Steel Manufacturers of Australia
Engineers Australia
Industrial Research Limited
National Association of Testing Authorities Australia
New Zealand Non-Destructive Testing Association
TestSafe Australia
Victorian WorkCover Authority
Welding Technology Institute of Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Web Shop at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Global Standard*, has a full listing of revisions and amendments published each month.

Australian Standards $^{\text{TM}}$ and other products and services developed by Standards Australia are published and distributed under contract by SAI Global, which operates the Standards Web Shop.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.org.au, or write to the Chief Executive, Standards Australia, GPO Box 476, Sydney, NSW 2001.

This Standard was issued in draft form for comment as DR 05194.

PREFACE

This Standard was prepared by the Australian members of the Joint Standards Australia/Standard New Zealand Committee MT-007, Non-destructive Testing of Metals and Materials, at the request of industry. This Standard supersedes AS 2452.3—1985, Non-destructive testing—Determination of thickness, Part 3: Use of ultrasonic testing.

After consultation with shareholders in both countries, Standards Australian and Standards New Zealand decided to develop this Standard as an Australian Standard rather than an Australian/New Zealand Standard.

The objective of this edition was to delete references to obsolete technology such as analog equipment and to revise the method of determining thickness by the use of correction factors.

This Standard is Part 3 of a series of Standards covering the methods used for determining thickness by means of non-destructive procedures.

The series comprises the following Parts:

AS

- Non-destructive testing—Determination of thickness
- 2452.1 Part 1: Determination of wall thickness of pipe by the use of radiography
- 2452.3 Part 3: Use of ultrasonic testing

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendix to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance
