# Australian Standard 2053—1984

---

## NON-METALLIC CONDUITS AND FITTINGS

**STANDARDS ASSOCIATION OF AUSTRALIA**

*Incorporated by Royal Charter*

F

This Australian standard was prepared by Committee EL/4, Electrical Accessories. It was approved on behalf of the Council of the Standards Association of Australia on 20 March 1984 and published on 4 June 1984.

---

The following interests are represented on Committee EL/4:

- Association of Consulting Engineers Australia
- Australian Electrical and Electronic Manufacturers Association
- Confederation of Australian Industry
- Department of Defence Support
- Department of Public Works, N.S.W.
- Department of Transport and Construction
- Electrical Contractors Associations of Australia
- Electrical Regulatory Authorities
- Electricity Supply Association of Australia
- Plastics Institute of Australia Incorporated
- Railways of Australia Committee
- Telecom Australia

---

**Review of Australian Standards.** To keep abreast of progress in industry, Australian standards are subject to periodic review and are kept up-to-date by the issue of amendments or new editions as necessary. It is important therefore that standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all SAA publications will be found in the Annual List of Australian Standards; this information is supplemented each month by SAA's journal 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn standards.

Suggestions for improvements to Australian standards, addressed to the head office of the Association, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian standard should be made without delay in order that the matter may be investigated and appropriate action taken.

## PREFACE

This edition of this standard was prepared by the Association's Committee on Electrical Accessories to supersede AS 2053—1980.

This edition introduces a new Section 5 which specifies requirements for corrugated conduit intended for use in applications not requiring continuous flexing and having some degree of mechanical endurance, e.g. concrete pours, the following of complex profiles, or where flexibility is required. It is expected that at some later stage AS 3000 will include requirements for the installation of such conduit.

Other changes in this edition include the addition of 125 mm rigid UPVC conduit, the inclusion of minimum inside diameters of flexible conduit fittings and the updating of the flammability tests.
