

AS 1217.6—1985

Australian Standard[®]

**ACOUSTICS—DETERMINATION OF
SOUND POWER LEVELS OF NOISE
SOURCES**

**Part 6—PRECISION
METHODS FOR
ANECHOIC AND
HEMI-ANECHOIC
ROOMS**

This Australian standard was prepared by Committee AK/2, Techniques for Measurement. It was approved on behalf of the Council of the Standards Association of Australia on 30 August 1984 and published on 4 April 1985.

The following interests are represented on Committee AK/2:

Australian Acoustical Society
CSIRO, Division of Building Research
CSIRO, National Measurement Laboratory
Department of Aviation
Department of Industrial Relations, N.S.W.
Department of Housing and Construction
Environment Protection Authority of Victoria
Metal Trades Industry Association of Australia
National Acoustic Laboratories
Telecom Australia
University of Adelaide
University of Queensland

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This standard was issued in draft form for comment as DR 83080.

PREFACE

This standard was prepared by the Association's Committee on Techniques for Measurement. It supersedes AS 1217—1972, Methods of Measurement of Airborne Sound Emitted by Machines.

This standard is based on ISO 3745—1977, Acoustics—Determination of Sound Power Levels of Noise Sources—Precision Methods for Anechoic and Hemi-anechoic Rooms.

© Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

CONTENTS

	<i>Page</i>
FOREWORD	5
SECTION 1. SCOPE AND GENERAL	
1.1 Scope	7
1.2 Field of Application	7
1.3 Referenced Documents	7
1.4 Measurement Uncertainty	7
1.5 Definitions	8
SECTION 2. TEST ROOM REQUIREMENTS	
2.1 General	9
2.2 Room Volume	9
2.3 Criteria for Temperature and Humidity	9
2.4 Criteria for the Reflecting Plane	9
SECTION 3. INSTRUMENTATION	
3.1 General	10
3.2 The Microphone and Its Associated Cable	10
3.3 Frequency Response of the Instrumentation System	10
3.4 Weighting Network, Frequency Analyser	10
3.5 Calibration	10
SECTION 4. INSTALLATION AND OPERATIONS OF SOURCE	
4.1 General	11
4.2 Installation of Source	11
4.3 Method of Mounting	11
4.4 Choice of Mounting Method	11
4.5 Auxiliary Equipment	11
4.6 Operation of Source During Test	11
SECTION 5. DETERMINATION OF MEAN-SQUARE PRESSURE	
5.1 General	12
5.2 Measurement Surface	12
5.3 Microphone Positions	12
5.4 Conditions of Measurement	13
5.5 Observations to be Obtained	13
5.6 Correction for Background Sound Pressure Levels	13
5.7 Calculation of Surface Sound Pressure Level	14
SECTION 6. CALCULATION OF SOUND POWER LEVEL	
6.1 Free Field	15
6.2 Free Field over a Reflecting Plane	15
6.3 Weighted Sound Power Level and Band Sound Power Levels	15
SECTION 7. INFORMATION TO BE RECORDED AND REPORTED	
7.1 Information to be Recorded	16
7.2 Information to be Reported	16
APPENDICES	
A Test Room Qualification Procedures	17
B Recommended Array of Microphone Positions in a Free Field	19
C Basic Array of Microphone Positions in a Free Field Over a Reflecting Plane	21
D Coaxial Circular Paths in parallel Planes for Microphone Traverses in a Free Field over a Reflecting Plane	23
