

Australian Standard<sup>®</sup>

**Components for fire extinguishing systems using gas—Requirements and test methods—Container valve assemblies and their actuators; selector valves and their actuators; nozzles; flexible and rigid connectors; and check valves and non-return valves**

This Australian Standard® was prepared by Committee FP-011, Special Hazards Fire Protection Systems. It was approved on behalf of the Council of Standards Australia on 24 February 2010..

This Standard was published on 25 March 2010.

---

The following are represented on Committee FP-011:

- Australian Chamber of Commerce and Industry
  - Australian Industry Group
  - Australian Museum
  - Commerce Queensland
  - Department of Defence (Australia)
  - Engineers Australia
  - Fire Protection Association Australia
  - Institute of Security Executives
  - National Fire Industry Association
  - National Measurement Institute
  - Society of Fire Protection Engineers Australasian Chapter
- 

This Standard was issued in draft form for comment as DR 08131.

Standards Australia wishes to acknowledge the participation of the expert individuals that contributed to the development of this Standard through their representation on the Committee and through the public comment period.

---

### **Keeping Standards up-to-date**

Australian Standards® are living documents that reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued.

Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments that may have been published since the Standard was published.

Detailed information about Australian Standards, drafts, amendments and new projects can be found by visiting [www.standards.org.au](http://www.standards.org.au)

Standards Australia welcomes suggestions for improvements, and encourages readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at [mail@standards.org.au](mailto:mail@standards.org.au), or write to Standards Australia, GPO Box 476, Sydney, NSW 2001.

RECONFIRMATION NOTICE

Technical Committee FP-011 has reviewed the content of this publication and in accordance with Standards Australia procedures for reconfirmation, it has been determined that the publication is still valid and does not require change.

Certain documents referenced in the publication may have been amended since the original date of publication. Users are advised to ensure that they are using the latest versions of such documents as appropriate, unless advised otherwise in this Reconfirmation Notice.

Approved for reconfirmation in accordance with Standards Australia procedures for reconfirmation on 08 August 2023.

The following are represented on Technical Committee FP-011:

Australian Chamber of Commerce and Industry  
Australian Industry Group  
CSIRO  
Engineers Australia  
Engineers Australia/ Society of Fire Safety  
Fire Protection Association Australia  
National Fire Industry Association

## PREFACE

This Standard was prepared by the Standards Australia Committee FP-011, Special Hazards Fire Protection Systems.

The objective of this Standard is to assist in preventing the loss of life due to fire by providing requirements to ensure the performance/operation of container valve assemblies, flexible connectors, check valves and non-return valves, selector valves and associated actuators and discharge nozzles for use in gaseous fire extinguishing systems.

This Standard is technically identical with, and has been reproduced from ISO 16003:2008, *Components for fire extinguishing systems using gas—Requirements and test methods—Container valve assemblies and their actuators; selector valves and their actuators; nozzles; flexible and rigid connectors; and check valves and non-return valves*. Editorial corrections have been made as follows:

- (a) Clause 5.7.2 The reference in the first sentence to Clause 4.8 is *deleted* and *replaced* with '4.9'.
- (b) Clause 5.15 The reference in the first sentence to Clause 4.8 is *deleted* and *replaced* with '4.17'.
- (c) Clause 5.16 The reference in the first sentence to Clause 4.8 is *deleted* and *replaced* with '4.8'.

These editorial corrections are planned for incorporation into an ISO corrigendum to ISO 16003:2008.

As this Standard is reproduced from an international standard, the following applies:

- (i) its number appears on the cover and title page while the international standard number appears only on the cover.
- (ii) In the source text 'International Standard' should read 'Australian Standard'.
- (iii) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

<i>Reference to International Standard</i>	<i>Australian Standard</i>
EN 60529	AS 60529
Specification for degrees of protection provided by enclosures (P-Codes)	Degrees of protection provided by enclosures (IP Code)
ISO 7	AS ISO 7
Pipe threads where pressure-tight joints are made on the threads	Pipe threads where pressure-tight joints are made on the threads
7-1:	7.1:
Part 7-1: Dimensions, tolerances and designation	Part 7-1: Dimensions, tolerances and designation
7005	AS 4331
Metallic flanges	Metallic flanges
	4331.1
	Part 1: Steel flanges
	4331.2
	Part 2: Composite flanges
	4331.3
	Part 3: Copper alloy and composite flanges
