Preface

This Standard was prepared by the Australian members of the Joint Standards Australia/Standards New Zealand Committee SF-041, Safety of Machinery.

The objective of this Standard is to specify safety requirements for machine design, construction, installation, commissioning, operation, adjustment, maintenance and cleaning of wrapping machines.

This Standard applies to the following groups of machines:

(a) Wrapping machines which partially wrap products

(b) Wrapping machines which form a complete wrap without sealing.

(c) Wrapping machines which form a complete wrap with sealing.

(d) Shrinking equipment which is connected to wrapping machines covered by this Standard.

This Standard is identical with, and has been reproduced from, EN 415-5:2006+A1:2009, *Safety of packaging machines* — Part 5: *Wrapping machines*.

As this document has been reproduced from an International Standard, the following applies:

(i) In the source text 'this European Standard' should read 'this Australian Standard'.

(ii) A full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms 'normative' and 'informative' are used in Standards to define the application of the appendices or annexes to which they apply. A 'normative' appendix or annex is an integral part of a Standard, whereas an 'informative' appendix or annex is only for information and guidance.
