AS/NZS 60704.1:2009

Australian/New Zealand Standard™

**Household and similar electrical
appliances—Test code for the
determination of airborne acoustical
noise**

Part 1: General requirements

AS/NZS 60704.1:2009

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee EL-015, Quality and Performance of Household Electrical Appliances. It was approved on behalf of the Council of Standards Australia on 11 February 2009 and on behalf of the Council of Standards New Zealand on 23 February 2009. This Standard was published on 22 April 2009.

The following are represented on Committee EL-015:

Australian Industry Group
Business New Zealand
CHOICE
Consumer Electronics Suppliers Association
Department of Employment and Industrial Relations, Qld
Department of the Environment, Water, Heritage and the Arts
Department of Water and Energy, NSW
Electrical Compliance Testing Association
Energy Efficiency & Conservation Authority of New Zealand
Energy Safe Victoria
Institution of Professional Engineers New Zealand
National Appliance and Equipment Energy Efficiency Committee
National Association of Testing Authorities Australia
Office of the Technical Regulator, SA
Water Services Association of Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR 07060.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL-015, Quality and Performance of Household Electrical Appliances.

The objective of this Standard is to define the methods of determination of airborne acoustical noise emitted by household and similar electrical appliances supplied from mains or from batteries.

This Standard is identical with, and has been reproduced from IEC 60704-1, Ed. 2.0 (1997), *Household and similar electrical appliances—Test code for the determination of airborne acoustical noise—Part 1: General requirements*.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘this part of IEC 60704’ should read ‘this Australian/New Zealand Standard’.
- (c) A full point should be substituted for a comma when referring to a decimal marker.

The terms ‘normative’ and ‘informative’ are used to define the application of the annex to which they apply. A normative annex is an integral part of a standard, whereas an informative annex is only for information and guidance.

CONTENTS

	<i>Page</i>
1 Scope and object	1
1.1 Scope	1
1.2 Object	1
1.3 Measurement uncertainty	2
2 Normative references	2
3 Terms and definitions	3
4 Measurement methods and acoustical environments	4
4.1 General	4
4.2 Direct method	4
4.3 Comparison method	5
4.4 Acoustical environments	5
5 Instrumentation	6
5.1 Instrumentation for measuring acoustical data	6
5.2 Instrumentation for measuring climatic conditions	6
5.3 Instrumentation for measuring operating conditions	6
6 Operation and location of appliances under test	6
6.1 Equipping and pre-conditioning of appliances	6
6.2 Supply of electric energy and of water or gas	7
6.3 Climatic conditions	7
6.4 Loading and operating of appliances during tests	7
6.5 Location and mounting of appliances	8
7 Measurement of sound pressure levels	9
7.1 Microphone array, measurement surface and RSS location for essentially free-field conditions over reflecting plane(s)	9
7.2 Microphone array and RSS location in hard-walled test rooms	11
7.3 Microphone array and RSS location in special reverberation test rooms	12
7.4 Measurements	12
8 Calculation of sound pressure and sound power levels	13
8.1 Corrections for background noise levels	13
8.2 Corrections for the test environment	13
8.3 Calculation of sound pressure level averaged over the microphone positions	14
8.4 Calculation of sound power levels with the comparison method	14
8.5 Calculation of sound power levels in free-field conditions over a reflecting plane	15
8.6 Calculation of A-weighted sound power level with the direct method in special reverberation test rooms	15
9 Information to be recorded	15
9.1 General data	15
9.2 Description of appliance under test	15
9.3 Measurement method	16
9.4 Acoustical test environment	16
9.5 <i>Instrumentation</i>	16
9.6 Equipment and pre-conditioning of appliance under test	16
9.7 Electric supply, water supply, etc.	16
