

Safety of machinery

Part 3302: Robots and robotic devices—Safety requirements for industrial robots—Robot systems and integration

This Australian Standard® was prepared by Committee SF-041, Safety of Machinery. It was approved on behalf of the Council of Standards Australia on 30 April 2017. This Standard was published on 30 June 2017.

The following are represented on Committee SF-041:

- Australian Industry Group
 - Australian Manufacturing Workers Union
 - Department of Industry, Skills and Regional Development, NSW
 - Engineers Australia
 - Human Factors and Ergonomics Society of Australia
 - Institute of Instrumentation, Control and Automation, Australia
 - National Safety Council of Australia
 - Safety Institute of Australia
 - SafeWork NSW
 - The University of Melbourne
 - Workplace Health and Safety Queensland
 - WorkSafe Victoria
-

This Standard was issued in draft form for comment as DR AS 4024.3302:2017.

Standards Australia wishes to acknowledge the participation of the expert individuals that contributed to the development of this Standard through their representation on the Committee and through the public comment period.

Keeping Standards up-to-date

Australian Standards® are living documents that reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued.

Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments that may have been published since the Standard was published.

Detailed information about Australian Standards, drafts, amendments and new projects can be found by visiting www.standards.org.au

Standards Australia welcomes suggestions for improvements, and encourages readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.org.au, or write to Standards Australia, GPO Box 476, Sydney, NSW 2001.

PREFACE

This Standard was prepared by the Standards Australia Committee SF-041, Safety of Machinery.

The objective of this Standard is to specify safety requirements for the integration of industrial robots and industrial robot systems, as defined in ISO 10218-1:2011, and industrial robot cell(s). The integration includes the following:

- (a) The design, manufacturing, installation, operation, maintenance and decommissioning of the industrial robot system or cell.
- (b) Necessary information for the design, manufacturing, installation, operation, maintenance and decommissioning of the industrial robot system or cell.
- (c) Component devices of the industrial robot system or cell.

It describes the basic hazards and hazardous situations identified with these systems, and provides requirements to eliminate or adequately reduce the risks associated with these hazards.

This Standard is identical with, and has been reproduced from ISO 10218-2:2011, *Robots and robotic devices—Safety requirements for industrial robots, Part 2: Robot systems and integration*.

As this Standard is reproduced from an International Standard, the following applies:

- (i) In the source text ‘this part of ISO 10218’ should read ‘this Australian Standard’.
- (ii) A full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the annex to which they apply. A ‘normative’ annex is an integral part of a Standard, whereas an ‘informative’ annex is only for information and guidance.

CONTENTS

Foreword	iv
Introduction.....	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Hazard identification and risk assessment.....	4
4.1 General	4
4.2 Layout design	5
4.3 Risk assessment	6
4.4 Hazard identification	8
4.5 Hazard elimination and risk reduction	9
5 Safety requirements and protective measures	9
5.1 General	9
5.2 Safety-related control system performance (hardware/software).....	9
5.3 Design and installation	10
5.4 Limiting robot motion	14
5.5 Layout.....	16
5.6 Robot system operational mode application.....	17
5.7 Pendants.....	21
5.8 Maintenance and repair	22
5.9 Integrated manufacturing system (IMS) interface.....	23
5.10 Safeguarding.....	24
5.11 Collaborative robot operation	32
5.12 Commissioning of robot systems	35
6 Verification and validation of safety requirements and protective measures	36
6.1 General	36
6.2 Verification and validation methods.....	37
6.3 Required verification and validation	37
6.4 Verification and validation of protective equipment.....	37
7 Information for use	38
7.1 General	38
7.2 Instruction handbook.....	39
7.3 Marking.....	43
Annex A (informative) List of significant hazards	44
Annex B (informative) Relationship of standards related to protective devices.....	47
Annex C (informative) Safeguarding material entry and exit points.....	49
Annex D (informative) Operation of more than one enabling device	52
Annex E (informative) Conceptual applications of collaborative robots	53
Annex F (informative) Process observation.....	55
Annex G (normative) Means of verification of the safety requirements and measures	58
Bibliography.....	71
