

AS 1853—1983

Australian Standard[®]

**Automatic oil and gas
burners—Mechanical draught**

[Title allocated by Defence Cataloguing Authority:
BURNER: GAS AND OIL (Automatic, Industrial or Commercial)
... NSC 4530]

This Australian standard was prepared by Committee ME/21, Industrial Fuel-fired Equipment. It was approved on behalf of the Council of the Standards Association of Australia on 27 June 1983 and published on 5 September 1983.

The following interests are represented on Committee ME/21:

Australian Gas Association
Australian Institute of Energy
Australian Institute of Petroleum Limited
Bureau of Steel Manufacturers of Australia
Confederation of Australian Industry
Department of Labour and Industry, Victoria
Department of Mines and Energy, Northern Territory
Department of Transport and Construction
Heating and Cooling Industry Association of Victoria
Insurance Council of Australia
Metal Trades Industry Association of Australia
Metropolitan Fire Brigades Board, Melbourne
University of Melbourne

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This Standard was issued in draft form for comment as DR 82112.

PREFACE

This edition of this standard was prepared by the Association's Committee on Industrial Fuel-fired Equipment to supersede AS 1853—1976, Rules for the Design and Construction of Single Automatic Oil and Gas Burners and Their Application to Boilers.

The reference standard used by earlier boiler codes had been a section of AS CB5 which gave basic rules for oil-firing. This was replaced in 1973 by AS 1375, SAA Industrial Fuel Fired Appliances Code, which became the basic standard for the entire range of industrial oil-fired or gas-fired equipment. While that standard covered the general case very well, of necessity it dealt with broad principles; therefore, it was decided that a specialist standard was needed, to detail the specific requirements for burner systems on small and medium boilers of the type that usually operate automatically.

It was found as drafting proceeded, that the resulting standard fell naturally into two parts, one being a technical specification for automatic burners which would incorporate the best technology currently available, the second being how to apply such a burner to the boilers in question. It was recognized at the time that the automatic burner being described was suitable for a wider field of applications than boilers, but time did not permit the possibilities to be explored and developed, so AS 185—1976 had a basic orientation towards boilers.

Subsequently an additional need arose for a control system having a higher level of sophistication, to cater for a class of boilers that had become known as 'unattended'. This development caused a reassessment of subject boundaries and committee responsibilities, with the result that the two subjects of an automatic burner specification on the one hand and boiler management and control systems on the other were separated, the former to remain with the Committee on Industrial Fuel-fired Equipment, the latter being transferred to the Committee on Boilers and Unfired Pressure Vessels.

Thus, this edition is purely a specification for a high quality automatic burner for industrial use, be it for a boiler, furnace, oven or any similar combustion application. In effect, it describes how the basic burner control functions prescribed in AS 1375 may be carried out automatically. Amongst other things, it requires of the burner an ability to accept certain control or shutdown signals from the appliance to which it is attached, but the manner in which those signals are generated by the appliance or boiler is a matter for other standards.

This standard has no legal authority in its own right, but may acquire legal standing in one or more of the following circumstances:

- (a) Adoption by a Statutory Authority having jurisdiction.
- (b) Adoption by a purchaser as a required standard of construction when placing a contract.
- (c) Adoption when a supplier or contractor states that equipment is in accordance with it.

Adoption by a Statutory Authority would probably occur indirectly, e.g. it might be referred to by AS 1375 or by AS 1200, SAA Boiler Code, each of which would itself be adopted directly by an Authority. In any case, the standard may need to be read in conjunction with, but will not take a precedence over, any statutory regulations that may be applicable in the area of installation.

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

CONTENTS

	<i>Page</i>
SECTION 1. SCOPE AND GENERAL	
1.1 Scope	4
1.2 Application	4
1.3 New Designs and Innovations	4
1.4 Interpretations	4
1.5 Referenced Documents	4
1.6 Definitions	4
SECTION 2. DESIGN AND CONSTRUCTION	
2.1 General	6
2.2 Burner Management System	6
2.3 Ignition System and Starting Provisions	6
2.4 Air Supply and Control System	7
2.5 Combustion System	7
2.6 Power-operated Valves	7
2.7 Specific Requirements for Oil Systems	8
2.8 Specific Requirements for Gas Systems	8
2.9 Functional Characteristics	9
2.10 Marking and Instructions	10
APPENDICES	
A Suitability of Materials	11
B Filtration of Oil Fuels	12
C Typical Layouts of Gas Supply and Control Systems	13
D Typical Burner Firing Sequences	17
E Typical Layouts of Oil Supply and Control Systems	19
F Burner Selection and Application Guide	21
G Model Commissioning Procedure	23
