

AS/NZS 3108:1994

Australian/New Zealand Standard

**Approval and test specification—
Particular requirements for isolating
transformers and safety isolating
transformers**

AS/NZS 3108:1994

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee EL/2, Electrical Approvals Standards. It was approved on behalf of the Council of Standards Australia on 14 April 1994 and on behalf of the Council of Standards New Zealand on 22 June 1994. It was published on 18 July 1994.

The following interests are represented on Committee EL/2:

Association of Certification Bodies
Association of New Zealand Electrical Appliance Distributors
Australian Chamber of Commerce and Industry
Australian Electrical and Electronic Manufacturers Association
Consumer Electronics Suppliers Association
Electrical regulatory authorities
Electricity Supply Association of Australia
Electrical test laboratories
Electricity Supply Association, New Zealand
Federal Bureau of Consumers Affairs, Commonwealth
Institution of Engineers, Australia
Metal Trades Industry Association of Australia
Ministry of Commerce, New Zealand
New Zealand Manufacturers Federation

Review of Standards. To keep abreast of progress in industry, Joint Australian/New Zealand Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Joint Standards and related publications will be found in the Standards Australia and Standards New Zealand Catalogue of Publications; this information is supplemented each month by the magazines 'The Australian Standard' and 'Standards New Zealand', which subscribing members receive, and which give details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Joint Standards, addressed to the head office of either Standards Australia or Standards New Zealand, are welcomed. Notification of any inaccuracy or ambiguity found in a Joint Australian/New Zealand Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

AS/NZS 3108:1994

Australian/New Zealand Standard

Approval and test specification— Particular requirements for isolating transformers and safety isolating transformers

AS 3108—1990 first published in Australia in part as AS C126—1939.
Second edition 1958.
AS C167 first published 1962.
Revised and redesignated AS 3167—1981 (withdrawn 1987).
AS C126—1958 revised and redesignated AS 3126—1981 (withdrawn 1989).
AS 3126—1981 and AS 3167—1981 revised and redesignated AS 3108.1—1984, AS 3108.2—1984 and AS 3108.3—1984.
Revised, amalgamated and redesignated AS 3108—1990.

First published in New Zealand as NZS/AS 3108:1990.

Jointly revised and designated as Joint Standard AS/NZS 3108:1994.

Incorporating:
Amdt 1—1995
Amdt 2—1995
Amdt 3—1996
Amdt 4—1996
Amdt 5—1997
Amdt 6—1997

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL/2 on Electrical Approvals Standards, to supersede AS 3108—1990 in Australia and NZS/AS 3108:1990 in New Zealand. It was prepared to align Australian approval and test specifications and New Zealand Standards progressively with International Electrotechnical Commission (IEC) Standards for isolating and safety isolating transformers.

This Standard is issued as a Joint Standard under the terms of the Active Cooperation Agreement between Standards Australia and Standards New Zealand.

This Standard closely follows IEC 742:1983, *Isolating transformers and safety isolating transformers* including Amendment No.1.

This Standard is in three Chapters as follows:

- (a) Chapter 1 gives general requirements for all isolating transformers and safety isolating transformers, whatever their use. These requirements are supplemented (indicated by 'ADDITION') or modified (indicated by 'REPLACEMENT') as outlined in Chapters 2 and 3.
- (b) Chapter 2 gives supplementary requirements applicable to isolating transformers used as shaver transformers.
- (c) Chapter 3 gives supplementary requirements applicable to safety isolating transformers. It is divided into Sections applicable to various types of transformers as follows:
 - (i) Section 1—Safety isolating transformers for general use.
 - (ii) Section 2—Transformers for toys.
 - (iii) Section 3—Bell transformers.
 - (iv) Section 4—Transformers for Class III luminaires incorporating incandescent lamps.

Each Section is independent of the other Sections and the additions or replacements which are indicated refer back to the general requirements of Chapter 1.

A number of variations have been made in this Standard to the requirements of IEC 742:1983. These variations are necessary, to take into account the national requirements for isolating transformers and safety isolating transformers that apply in both Australia and New Zealand. The variations are indicated throughout the text of this Standard by marginal bars, located against the changed text or Figure. The majority are technical. Other variations to Notes, explanatory matter, Figures and references to Australian and New Zealand Standards and Specifications are also included for completeness.

Descriptions of these variations are to be found in Annex B to this Standard, given in the order found within the body of this Standard. These variations also form the Australian national variations for purposes of the IEC scheme for recognition of results of testing to Standards for safety of electrical equipment (the CB scheme).

The numbering of Clauses and Figures closely follows that of IEC 742:1983. To allow for the introduction of additional material by the IEC, the numbers 1 to 100 have been reserved. Clauses numbered from 101 are used by the IEC to add to the body of the Standard by the Chapters. To allow additional material to be introduced by Australia or New Zealand, the numbers 201 to 300 are used. This scheme has been introduced to reduce the likelihood of the IEC and Australia or New Zealand using the same Clause or Figure number for differing requirements. The use of the word VOID indicates that the IEC requirement is not used in Australia or New Zealand. The word is also used where

the deletion of a particular requirement such as a Table would lead to the consequential renumbering of references within the body of the Standard and succeeding tables. Where Australia and New Zealand have added a requirement or made a change to a particular Clause of IEC 742:1983 that Clause number remains unchanged.

In the text of this Standard, the following print types are used:

- (i) Requirements, compliance with which can be tested and definitions: in large roman type.
- (ii) Explanations, advice, introductions, general statements, exceptions and references in smaller roman type.
- (iii) Headings of sub-clauses and test specifications *in italic type*.

In Australia this Standard supersedes AS 3108—1990 from date of publication. In New Zealand this Standard supersedes NZS/AS 3108:1990 from date of publication.

This Standard incorporates Amendment Nos. 1, 2 and 3 to the 1990 edition and contains changes which more closely align it with IEC 742:1983. Chapter 2, containing supplementary requirements for isolating transformers for general use and shaver transformers does not contain requirements for shaver supply units. These are contained in AS/NZS 3194 Approval and test specification—Electric shaver supply units.

This Standard requires reference to the following documents:

STANDARDS

AS

1042	Direct-acting indicating electrical measuring instruments and their accessories
1099	Basic environmental testing procedures for electrotechnology
1099.2	Part 2: Tests
1099.2Bd	Test Bd—Dry heat test for heat-dissipating specimens with gradual change of temperature
1621	Pressure-sensitive adhesive electrical tapes
1621.1	Part 1: General requirements
1852	International Electrotechnical Vocabulary
1939	Degrees of protection provided by enclosures for electrical equipment (IP Code)
2005	Low voltage fuses—Fuses with enclosed fuse-links
2420	Fire test methods for solid insulating materials and non-metallic enclosures used in electrical equipment
2768	Electrical insulating materials—Evaluation and classification based on thermal endurance
3000	Electrical installations—Buildings, structures and premises (known as the SAA Wiring Rules)

APPROVAL AND TEST SPECIFICATIONS

AS

3109	Appliance couplers for household and similar general purposes
3109.1	General requirements
3123	Plugs, socket-outlets and couplers for general industrial application
3191 (NZS/AS 3191)	Electric flexible cords
