## **AS/NZS 4029.2:2000**

---

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee EL/5, Secondary Batteries. It was approved on behalf of the Council of Standards Australia on 10 April 2000 and on behalf of the Council of Standards New Zealand on 11 April 2000. It was published on 6 July 2000.

---

The following interests are represented on Committee EL/5:

Australian Automobile Association  
Australian Automotive Aftermarket Association  
Australian Chamber of Commerce and Industry  
Australian Electrical and Electronic Manufacturers Association  
Electricity Supply Association of Australia  
Federal Chamber of Automotive Industries  
Telstra Corporation

Additional interests participating in the preparation of this Standard:

AirServices Australia

---

### **Keeping Standards up-to-date**

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Australia web site at [www.standards.com.au](http://www.standards.com.au) or Standards New Zealand web site at [www.standards.co.nz](http://www.standards.co.nz) and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia International or Standards New Zealand at the address shown on the back cover.

## PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL/5, Secondary Batteries, to supersede AS 4029.2—1992, *Stationary batteries—Lead-acid, Part 2: Valve-regulated sealed type*.

The objective of this Standard is to provide users and manufacturers of valve-regulated, stationary, lead-acid batteries with definitions of terms, safety requirements, methods of specifying performance and methods of test.

This Standard forms part of a series as follows:

AS

4029 Stationary batteries—Lead-acid

4029.1 Part 1: Vented type

4029.3 Part 3: Pure lead positive pasted plate type

AS/NZS

4029 Stationary batteries—Lead-acid

4029.2 Part 2: Valve-regulated type (this Standard)

This Standard has been adopted with national modifications and has been reproduced from IEC 60896-2:1995, *Stationary lead-acid batteries—General requirements and methods of test, Part 2: Valve regulated types*.

Variations to IEC 60896-2:1995 are indicated at the appropriate places throughout this Standard. Strikethrough (~~example~~) identifies IEC tables, figures and passages of text which, for the purposes of this Australian/New Zealand Standard, are deleted. Where Australian/New Zealand tables, figures or passages of text are added, each is set in its proper place and identified by shading (**example**). Added figures are not themselves shaded, but are identified by a shaded border.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘this part of IEC 896’ should read ‘this Australian/New Zealand Standard’.
- (c) A full point should be substituted for a comma when referring to a decimal marker.

The term ‘informative’ has been used in this Standard to define the application of the annex to which it applies. An ‘informative’ annex is only for information and guidance.

# CONTENTS

	Page
PREFACE.....	ii
Clause	
SECTION 1: GENERAL	
1.1 Scope and object.....	1
1.2 Normative references .....	1
1.3 Definitions.....	2
SECTION 2: GENERAL REQUIREMENTS	
2.1 Mechanical strength .....	2
2.2 Control valves .....	3
2.3 Flammability of containers and lids/covers.....	3
2.4 Gas emission .....	3
2.5 Heat generation (thermal runaway).....	3
2.6 Marking.....	3
2.7 Information for the package and the battery accommodation.....	4
SECTION 3: FUNCTIONAL CHARACTERISTICS	
3.1 Capacity .....	4
3.2 Suitability for floating battery operation.....	5
3.3 Endurance in cycles .....	5
3.4 Charge retention .....	5
3.5 Short-circuit current and internal resistance.....	6
SECTION 4: GENERAL TEST CONDITIONS	
4.1 Accuracy of measuring instruments .....	6
4.2 Preparation of cells and monobloc batteries for testing.....	7
SECTION 5: TEST METHODS	
5.1 Capacity test.....	7
5.2 Test of suitability for floating battery operation.....	8
5.3 Endurance in cycles .....	8
5.4 Test for charge retention.....	9
5.5 Test for short-circuit current and internal resistance for cells or monobloc batteries .....	9
SECTION 6: TESTS AND TEST SEQUENCES	
6.1 Test series .....	12
Annexes	
A High current safety tests .....	15
B Thermal runaway.....	16
C Test of seal integrity .....	17
D Test for gas emission .....	18
