

Specification for radio disturbance and immunity measuring apparatus and methods

Part 1.1: Radio disturbance and immunity measuring apparatus — Measuring apparatus (CISPR 16-1- 1:2019 (ED 5.0) MOD)

AS CISPR 16.1.1:2020

This Australian Standard® was prepared by TE-003, Electromagnetic Compatibility. It was approved on behalf of the Council of Standards Australia on 8 June 2020.

This Standard was published on 17 July 2020.

The following are represented on Committee TE-003:

- Australian Broadcasting Corporation
- Australian Communications and Media Authority
- Australian Industry Group
- Australian Information Industry Association
- Consumer Electronics Suppliers Association
- Department of Defence (Australian Government)
- Electrical Compliance Testing Association of Australia
- EMC Society of Australia
- Energy Networks Australia
- Engineers Australia
- Free TV Australia
- National Measurement Institute
- Wireless Institute Australia

This Standard was issued in draft form for comment as DR AS CISPR 16.1.1:2020.

Preface

This Standard was prepared by the Australian members of the Joint Standards Australia/Standards New Zealand Committee TE-003, Electromagnetic Compatibility, to supersede AS CISPR 16.1.1:2017, *Specification for radio disturbance and immunity measuring apparatus and methods, Part 1.1: Radio disturbance and immunity measuring apparatus—Measuring apparatus*.

The objective of this document is to specify the characteristics and performance of equipment for the measurement of radio disturbance in the frequency range 9 kHz to 18 GHz. In addition, requirements are provided for specialized equipment for discontinuous disturbance measurements.

The specifications in this document apply to electromagnetic interference (EMI) receivers and spectrum analyzers. The calibration requirements for measuring receivers are detailed in Annex J.

This document is an adoption with national modifications, and has been reproduced from CISPR 16-1-1:2019, *Specification for radio disturbance and immunity measuring apparatus and methods, Part 1-1: Radio disturbance and immunity measuring apparatus — Measuring apparatus*. The modifications are additional requirements and are set out in Appendix ZZ, which has been added at the end of the source text.

Appendix ZZ lists the variations to the normative references list for the application of this documents in Australia and New Zealand.

This document is structured as follows:

- (a) Preface.
- (b) CISPR 16-1-1:2019 (unedited from the contents page to the final clause of the source document).
- (c) Appendix ZZ—Australian/New Zealand variations to the source document.

As this document has been reproduced from an International Standard, the following applies:

- (i) In the source text “This part of CISPR 16” should read “this document”.
- (ii) A full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.
