

Australian Standard™

**High-voltage test techniques—Partial
discharge measurements**

This Australian Standard was prepared by Committee EL-007, Power Switchgear. It was approved on behalf of the Council of Standards Australia on 20 August 2001 and published on 28 September 2001.

The following interests are represented on Committee EL-007:

- Australasian Railway Association
- Australian British Chamber of Commerce
- Australian Electrical and Electronic Manufacturers Association
- Electricity Supply Association of Australia
- Institution of Engineers Australia
- Testing Interests (Australia)
- Transpower New Zealand
- WorkCover New South Wales

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Australia web site at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Australian Standard*, has a full listing of revisions and amendments published each month.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.com.au, or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

PREFACE

This Standard was prepared by the Standards Australia Committee EL-007, Power Switchgear to supersede AS 1018—1985.

The objective of this Standard is to define the terms used, relevant quantities to be measured, and to describe test and measuring circuits and procedures for the measurement of partial discharges in electrical equipment.

This Standard is identical with and has been reproduced from IEC 60270:2000, *High-voltage test techniques—Partial discharge measurements*.

This Standard differs from AS 1018—1985 in the following areas:

- (a) Definitions for partial discharge pulses and quantities related to partial discharge pulses, measuring systems and their characteristics and digital partial discharge instruments.
- (b) Test circuits and measuring systems.
- (c) Calibration of a measuring system in the complete test circuit and calibrators.
- (d) Tests and test procedures.
- (e) Measurement of uncertainty and sensitivity.

A reference to an International Standard identified in the Normative References Clause by strikethrough (~~example~~) is replaced by a reference to the Australian or Australian/New Zealand Standard(s) listed immediately thereafter and identified by shading (**example**). Where the struck-through referenced document and the referenced Australian or Australian/New Zealand Standard are identical, this is indicated in parenthesis after the title of the latter.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘this standard’ should read ‘this Australian Standard’.
- (c) A full point should be substituted for a comma when referring to a decimal marker.

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the annex to which they apply. A normative annex is an integral part of a Standard, whereas an informative annex is only for information and guidance.

CONTENTS

	<i>Page</i>
1 Scope.....	1
2 Normative references	2
3 Definitions	2
4 Test circuits and measuring systems	6
4.1 General requirements.....	6
4.2 Test circuits for alternating voltages	7
4.3 Measuring systems for apparent charge	7
4.3.1 General	7
4.3.2 Coupling device.....	7
4.3.3 Pulse train response of instruments for the measurement of apparent charge	8
4.3.4 Wide-band PD instruments	8
4.3.5 Wide-band PD instruments with active integrator	9
4.3.6 Narrow-band PD instruments	9
4.4 Requirements for measurements with digital PD-instruments.....	9
4.4.1 Requirements for measurement of apparent charge q	10
4.4.2 Requirements for measurement of test voltage magnitude and phase.....	10
4.5 Measuring systems for derived quantities	10
4.5.1 Coupling device.....	10
4.5.2 Instruments for the measurement of pulse repetition rate n	10
4.5.3 Instruments for the measurement of average discharge current I	10
4.5.4 Instruments for the measurement of discharge power P	11
4.5.5 Instruments for the measurement of quadratic rate D	11
4.5.6 Instruments for the measurement of the radio disturbance voltage.....	11
4.6 Ultra-wide-band instruments for PD detection.....	11
5 Calibration of a measuring system in the complete test circuit	11
5.1 General	11
5.2 Calibration procedure	12
6 Calibrators.....	12
6.1 General.....	12
6.2 Calibrators for the calibration of a measuring system in the complete test circuit...	13
6.3 Calibrators for performance tests on measuring systems.....	13
7 Maintaining the characteristics of calibrators and measuring systems.....	13
7.1 Schedule of tests.....	14
7.2 Maintaining the characteristics of calibrators	14
7.2.1 Type tests on calibrators	14
7.2.2 Routine tests on calibrators	14
7.2.3 Performance tests on calibrators	14
7.2.4 Performance checks on calibrators	15
7.2.5 Record of performance	15
7.3 Maintaining the characteristics of measuring systems	15
7.3.1 Type tests on PD measuring systems	16
7.3.2 Routine tests on measuring systems	16
