

AS/NZS CISPR 16.2.3:2012
CISPR 16-2-3, Ed. 3.1 (2010)
(Incorporating Amendment No. 1)

AS/NZS CISPR 16.2.3:2012

Australian/New Zealand Standard™

**Specification for radio disturbance and
immunity measuring apparatus and
methods**

**Part 2.3: Methods of measurement of
disturbances and immunity—Radiated
disturbance measurements**

AS/NZS CISPR 16.2.3:2012

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TE-003, Electromagnetic Interference. It was approved on behalf of the Council of Standards Australia on 12 October 2012 and on behalf of the Council of Standards New Zealand on 15 September 2012.
This Standard was published on 17 December 2012.

The following are represented on Committee TE-003:

Australian Broadcasting Corporation
Australian Chamber of Commerce and Industry
Australian Communications and Media Authority
Australian Electrical and Electronic Manufacturers Association
Australian Industry Group
Australian Information Industry Association
Consumer Electronics Suppliers Association
Curtin University
Department of Defence
Electrical Compliance Testing Association
EMC Society of Australia
Energy Networks Association
Engineers Australia
Free TV Australia
Lighting Council Australia
Ministry of Economic Development, New Zealand
National Measurement Institute
SingTel Optus
Wireless Institute Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR AS/NZS CISPR 16.2.3.

AS/NZS CISPR 16.2.3:2012
(Incorporating Amendment No. 1)

Australian/New Zealand Standard™

Specification for radio disturbance and immunity measuring apparatus and methods

Part 2.3: Methods of measurement of disturbances and immunity—Radiated disturbance measurements

Originated as part of AS/NZS 1052.2:1999.
Previous edition AS/NZS CISPR 16.2.3:2004.
Second edition 2012.
Reissued incorporating Amendment No. 1 (May 2015).

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TE-003, Electromagnetic Interference, to supersede AS/NZS CISPR 16.2.3:2004.

This Standard incorporates Amendment No. 1 (May 2015). The changes required by the Amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected.

The objective of this Standard is to specify the methods of measurement of radiated disturbance phenomena in the frequency range of 9 kHz to 18 GHz.

A1 | This Standard is identical with, and has been reproduced from, CISPR 16-2-3, Ed. 3.1 (2010), *Specification for radio disturbance and immunity measuring apparatus and methods—Part 2-3: Methods of measurement of disturbances and immunity—Radiated disturbance measurements* and its Amendment, CISPR 16-2-3 Edition 3.0/Amd 2:2014, which has been added at the end of the document.

This consolidated version of CISPR 16-2-3 consists of the third edition (2010) and its Amendment 1 (2010). It bears the edition number 3.1. The technical content is therefore identical to the base edition and its amendment and has been prepared for user convenience. A vertical line in the margin shows where the base publication has been modified by Amendment 1.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number appears on the cover and title page while the International Standard number appears only on the cover.
- (b) In the source text ‘this part of CISPR 16’ should read ‘this Australian/New Zealand Standard’.
- (c) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

<i>Reference to International Standard</i>	<i>Australian/New Zealand Standard</i>

16 Specification for radio disturbance and immunity measuring apparatus and methods	16 Specification for radio disturbance and immunity measuring apparatus and methods
16-1-1 Part 1-1: Radio disturbance and immunity measuring apparatus—Measuring apparatus	16.1.1 Part 1.1: Radio disturbance and immunity measuring apparatus—Measuring apparatus
16-4-1 Part 4-1: Uncertainties, statistics and limit modelling—Uncertainties in standardized EMC tests	16.4.1 Part 4.1: Uncertainties, statistics and limit modelling—Uncertainties in standardized EMC tests
16-4-2 Part 4-2: Uncertainties, statistics and limit modelling—Measurement instrumentation uncertainty	16.4.2 Part 4.2: Uncertainties, statistics and limit modelling—Uncertainty in EMC measurements

CONTENTS

1	Scope.....	10
2	Normative references	10
3	Terms and definitions	11
4	Types of disturbance to be measured	15
4.1	General.....	15
4.2	Types of disturbance	16
4.3	Detector functions	16
5	Connection of measuring equipment.....	16
6	General measurement requirements and conditions	17
6.1	General.....	17
6.2	Disturbance not produced by the equipment under test	17
6.2.1	General	17
6.2.2	Compliance (conformity assessment) testing	17
6.3	Measurement of continuous disturbance.....	17
6.3.1	Narrowband continuous disturbance	17
6.3.2	Broadband continuous disturbance	17
6.3.3	Use of spectrum analyzers and scanning receivers.....	18
6.4	Operating conditions of the EUT.....	18
6.4.1	Normal load conditions	18
6.4.2	The time of operation.....	18
6.4.3	Running-in time	18
6.4.4	Supply	18
6.4.5	Mode of operation.....	18
6.5	Interpretation of measuring results	18
6.5.1	Continuous disturbance	18
6.5.2	Discontinuous disturbance.....	19
6.5.3	Measurement of the duration of disturbance	19
6.6	Measurement times and scan rates for continuous disturbance	19
6.6.1	General	19
6.6.2	Minimum measurement times	19
6.6.3	Scan rates for scanning receivers and spectrum analyzers.....	20
6.6.4	Scan times for stepping receivers	21
6.6.5	Strategies for obtaining a spectrum overview using the peak detector	22
6.6.6	Timing considerations using FFT-based instruments	27
7	Measurement of radiated disturbances	30
7.1	Introductory remarks	30
7.2	Loop-antenna system measurements (9 kHz to 30 MHz)	31
7.2.1	General	31
7.2.2	General measurement method.....	31
7.2.3	Test environment.....	32
7.2.4	Configuration of the equipment under test	33
7.2.5	Measurement uncertainty for LAS.....	33
7.3	Open-area test site or semi-anechoic chamber measurements (30 MHz to 1 GHz)	33
7.3.1	Measurand	33
