Australian/New Zealand Standard™

Grid connection of energy systems via inverters

Part 2: Inverter requirements

AS/NZS 4777.2:2015

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee EL-042, Renewable Energy Power Supply Systems and Equipment. It was approved on behalf of the Council of Standards Australia on 17 September 2015 and on behalf of the Council of Standards New Zealand on 21 August 2015. This Standard was published on 9 October 2015.

The following are represented on Committee EL-042:

ACT Government—Environment and Planning Directorate

Australian Energy Market Operator

Australasian Fire and Emergency Service Authorities Council

Australian Industry Group

Australian PV Association

Australian Solar Council

Clean Energy Council

Clean Energy Regulator

Consumer Electronics Suppliers Association

CSIRO

Electrical Compliance Testing Association

Electrical Regulatory Authorities Council

Electrical Safety Organisation (New Zealand)

Electricity Engineers Association (New Zealand)

ElectroComms and Energy Utilities Industries Skills Council

Energy Networks Association

Engineers Australia

Institute of Electrical and Electronics Engineers

Institute of Electrical Inspectors

Institution of Professional Engineers New Zealand

Master Electricians Australia

Ministry of Business, Innovation and Employment (New Zealand)

National Electrical and Communications Association

New Zealand Electrical Institute

NSW Fair Trading

Office of the Technical Regulator, SA

Solar Energy Industries Association

Sustainable Electricity Association New Zealand

Sustainable Energy Association

University of New South Wales

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR AS/NZS 4777.2:2015.

AS/NZS 4777.2:2015

Australian/New Zealand Standard™

Grid connection of energy systems via inverters

Part 2: Inverter requirements

Originated in Australia as AS 4777.2—2002 and AS 4777.3—2002. Previous editions 2005. Jointly revised, amalgamated and designated as AS/NZS 4777.2:2015.

Jointly published by SAI Global Limited under licence from Standards Australia Limited, GPO Box 476, Sydney, NSW 2001 and by Standards New Zealand, Private Bag 2439, Wellington 6140.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL-042, Renewable Energy Power Supply Systems and Equipment, to supersede AS 4777.2—2005, *Grid connection of energy systems via inverters*, Part 2: *Inverter requirements*, and AS 4777.3—2005, *Grid connection of energy systems via inverters*, Part 3: *Grid protection requirements*, twelve months after its publication. During this twelve month period, this edition or AS 4777.2—2005 and AS 4777.3—2005 may be utilized.

The objective of this Standard is to specify minimum performance and safety requirements for the design, construction and operation of inverters intended for use in inverter energy systems for the injection of electric power through an electrical installation into the grid.

This Standard is part of a series on the grid connection of energy systems via inverters. The series is as follows:

AS/NZS

4777 Grid connection of energy systems via inverters

4777.1 Part 1: Installation requirements

4777.2 Part 2: Inverter requirements (this Standard)

There are many differences between this and the previous edition. They include but are not limited to the following:

- (a) Inclusion of a balance requirement for multiple phase systems.
- (b) Revised set-points and limits to match electricity distributor requirements.
- (c) Inclusion of provisions for demand response and power quality response modes. NOTE: The demand response provisions in this Standard follow the framework in the AS/NZS 4755 series demand response capabilities and supporting technologies for electrical products. At present there is no overlap in the scope of AS/NZS 4777.2 and AS/NZS 4755. However, if in future a new part of the AS/NZS 4755 series is to be published that covers some of the products or functions within the scope of this Standard, it is intended that the coverage of the demand response aspects of those products or functions will then reference the relevant parts of AS/NZS 4755. This would be achieved by a future amendment to AS/NZS 4777.2.
- (d) Inclusion of requirements for electrical safety in accordance with IEC 62109-1 and IEC 62109-2.
- (e) Inclusion of requirements for multiple mode inverter operation and requirements for systems with energy storage to meet electrical safety requirements in accordance with AS 62040.1.1.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendix to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance.
