AS/NZS 2327:2017 (Incorporating Amendment No. 1)

Australian/New Zealand Standard™

Composite structures—Composite steel-concrete construction in buildings

AS/NZS 2327:2017

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee BD-032, Composite Construction. It was approved on behalf of the Council of Standards Australia on 25 October 2017 and by the New Zealand Standards Approval Board on 6 November 2017. This Standard was published on 20 December 2017.

The following are represented on Committee BD-032:

Australian Building Codes Board Australian Industry Group Australian Steel Institute Bureau of Steel Manufacturers of Australia Cement Concrete and Aggregates Australia—Concrete Consult Australia Engineers Australia Ministry of Business, Innovation and Employment, NZ National Precast Concrete Association Australia New Zealand Heavy Engineering Research Association Steel Construction New Zealand Steel Reinforcement Institute of Australia Structural Engineering Society, New Zealand University of New South Wales University of Sydney

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Site at www.standards.org.au or Standards New Zealand web site at www.standards.govt.nz and looking up the relevant Standard in the online catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of Standards Australia or the New Zealand Standards Executive at the address shown on the back cover.

This Standard was issued in draft form for comment as DR AS/NZS 2327:2016.

AS/NZS 2327:2017 (Incorporating Amendment No. 1)

Australian/New Zealand Standard[™]

Composite structures—Composite steel-concrete construction in buildings

Originated in Australia as AS 1480 Supplement 1—1974. Previous edition AS 2327.1—2003. Jointly revised and redesignated as AS/NZS 2327:2017. Reissued incorporating Amendment No. 1 (June 2020).

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Technical Committee BD-032, Composite Construction, to supersede AS 2327.1—2003 Composite structures, Part 1—Simply supported beams.

This Standard incorporates Amendment No. 1 (June 2020). The changes required by the Amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected.

The objective of this Standard is to set out minimum requirements for the design, detailing and construction of composite steel-concrete members (beams, columns, slabs, joints) in buildings. The Standard is to be used by structural engineers when designing steel framed building structures.

This revision incorporates a number of technical and editorial changes, as follows:

- (a) Changes to the strength of concrete, raising the maximum compressive cylinder strength to 100 MPa.
- (b) Changes to the yield strength of steel, raising the maximum tensile yield strength to 690 MPa.
- (c) Provisions for the design of composite slabs using profiled steel sheeting.
- (d) Provisions for the design of composite beams.
- (e) Provisions for the design of composite columns.
- (f) Provisions for the design of composite joints.
- (g) Provisions for system behaviour floor design.
- (h) Provisions for fire design.
- (i) Provisions for earthquake design.

Statements expressed in mandatory terms in Notes to Tables are deemed to be requirements of this Standard.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendices to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance.

CONTENTS

Р	age
