

AS 4234—1994

Australian Standard[®]

**Solar water heaters—Domestic and
heat pump—Calculation of energy
consumption**

This Australian Standard was prepared by Committee CS/28, Solar Water Heaters. It was approved on behalf of the Council of Standards Australia on 24 June 1994 and published on 22 August 1994.

The following interests are represented on Committee CS/28:

Australian and New Zealand Solar Energy Society
Australian Electrical and Electronic Manufacturers Association
Department of Mines and Energy, N.T.
Department of Primary Industries & Energy (Commonwealth)
Electricity Supply Association of Australia
Energy Research Centre
Energy Victoria
Engineering and Water Supply Department, S.A.
Master Plumbers and Mechanical Services Association of Victoria
Metal Trades Industry Association of Australia
Office of Energy N.S.W
Solar Energy Industries Association of Australia
The Australian Gas Association
The University of New South Wales

Review of Australian Standards. *To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.*

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This Standard was issued in draft form for comment as DR 93059.

PREFACE

This Standard was prepared by the Standards Australia Committee CS/28 on Solar Water Heaters. The performance evaluation procedure defined in this Standard has been designed to provide a means of evaluating the annual task performance of solar and heat pump water heaters and to provide a means for quickly evaluating the performance of a series of product configurations for a range of locations.

This Standard sets out a method of determining the annual performance of domestic solar and heat pump water heaters using a combination of test results for component performance and a mathematical model to determine an annual load cycle task performance. The Standard also defines a procedure for evaluating the task performance of conventional domestic water heaters so that the energy savings of solar and heat pump water heaters can be evaluated relative to conventional water heaters operated under the same annual task load.

Testing of solar water heating systems under outdoor or indoor solar irradiance conditions has been defined in AS 2984—1987, *Solar water heaters—Methods of test for thermal performance—Outdoor test method*, and AS 2813—1985, *Solar water heaters—Methods of test for thermal performance—Simulator method*. Outdoor testing requires a long test period (8-10 weeks) due to the need to obtain stable inputs for a range of operating conditions. Indoor testing (solar simulator) provides stable input conditions, however, the equipment required and operating costs are very expensive. The major drawback of the outdoor or indoor solar irradiance testing is that the test must be repeated for every variation of system configuration offered by the supplier.

The procedure defined in this Standard overcomes the time and cost limitations of previous water heater performance standards and provides a procedure for calculating the purchased energy consumption of solar and heat pump domestic water heaters.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendix to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance.

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

CONTENTS

	<i>Page</i>
SECTION 1 SCOPE AND GENERAL	
1.1 SCOPE	4
1.2 APPLICATION	4
1.3 REFERENCED DOCUMENTS	5
1.4 DEFINITIONS	5
1.5 NOTATION	6
SECTION 2 PERFORMANCE EVALUATION PROCEDURE	
2.1 INTRODUCTION	7
2.2 COMPONENT TESTING	7
2.3 WATER HEATER CONFIGURATION	8
SECTION 3 PERFORMANCE EVALUATION	
3.1 ANNUAL TASK PERFORMANCE	9
3.2 WEATHER DATA	9
3.3 THERMAL ENERGY LOADS	9
3.4 COLD WATER TEMPERATURE	9
3.5 LOAD CAPACITY	9
3.6 PRESENTATION OF RESULTS	10
APPENDICES	
A STANDARD OPERATING CONDITIONS	11
B STANDING HEAT LOSS TEST PROCEDURE FOR RAISED ELEMENT TANKS	17
C SYSTEM CONFIGURATION SPECIFICATION	19
D TRNSYS SIMULATION PROGRAM	29
E SOLAR WATER HEATER TASK PERFORMANCE EVALUATION	30
