

AS 4254—2002
(Incorporating Amendment Nos 1 and 2)

AS 4254—2002

Australian Standard™

**Ductwork for air-handling systems in
buildings**

This Australian Standard was prepared by Committee ME-062, Ventilation and Airconditioning. It was approved on behalf of the Council of Standards Australia on 1 March 2002.

This Standard was published on 5 April 2002.

The following are represented on Committee ME-062:

Air-conditioning and Refrigeration Equipment Manufacturers Association of Australia
Australasian Fire Authorities Council
Australian Building Codes Board
Australian Chamber of Commerce and Industry
Australian Industry Group
Australian Institute of Building Surveyors
Australian Institute of Refrigeration Air-conditioning and Heating
Chartered Institution of Building Services Engineers
Department of Contract and Management Services, W.A.
FPA Australia
Institute of Refrigeration Heating and Airconditioning Engineers of New Zealand
Institution of Engineers Australia
National Environmental Health Forum
Plastics and Chemicals Industries Association
Property Council of Australia
Thermal Insulation Contractors Association of Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Web Shop at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Global Standard*, has a full listing of revisions and amendments published each month.

Australian Standards™ and other products and services developed by Standards Australia are published and distributed under contract by SAI Global, which operates the Standards Web Shop.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.org.au, or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

This Standard was issued in draft form for comment as DR 00102.

AS 4254—2002
(Incorporating Amendment Nos 1 and 2)

Australian Standard™

Ductwork for air-handling systems in buildings

Originated as AS 4254—1995.
Second edition 2002.
Reissued incorporating Amendment No. 1 (September 2002).
Reissued incorporating Amendment No. 2 (October 2004).

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee ME-062, Mechanical Ventilation and Airconditioning.

This Standard incorporates Amendment No. 1 (September 2002) and No. 2 (October 2004). The changes required by the Amendments are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected.

In the preparation of this Standard, consideration was given to a number of publications and relevant Standards. This Standard follows a number of requirements set out in the Sheet Metal and Air Conditioning Contractors National Association's (SMACNA) HVAC Duct Construction Standards for metal and flexible ducts (2nd edition), but with the requirements adapted to the products of local Australian industries.

The objective of this Standard is to provide standardized requirements for the manufacture and installation of ducts and associated equipment for the use of designers, manufacturers and installers of air-handling systems for buildings.

The approach to using SMACNA as the basis for an Australian Standard was strongly influenced by—

- (a) the extensive long-term background of SMACNA, which led this document to be regarded as well developed; and
- (b) the use of SMACNA in Australia over a considerable period as the basis for duct construction.

Assistance gained from SMACNA is hereby acknowledged.

The main changes from the 1995 edition are summarized as follows:

- (i) Amendments Nos 1 and 2 are incorporated.
- (ii) Clause 1.8 has been changed from base metal thickness to total coated thickness.
- (iii) Leakage testing has been clarified in Clause 2.2.5.
- (iv) Tables 2.4(c) and 2.4(d) have been expanded to include 1000 Pa.
- (v) Clause 2.7.2 on insulation for rigid ducts has been modified to provide for both internal and external insulation, to allow (a) and (b) tests to be combined and to require UL 181 tests are carried out on a 300 × 300 mm duct.
- (vi) New requirements for subfloor flexible subducts are added in Clause 2.8.5(g).
- (vii) New requirements for radius bends for flexible ducts are added in Clause 2.8.5(h).
- (viii) Typical connection details for ceiling diffusers, grilles, registers and diffuser plenums are added as Figures 3.4, 3.5 and 3.6.
- (ix) A pro forma flexible duct report summary has been included.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendix to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance.

Statements expressed in mandatory terms in notes to tables and figures are deemed to be requirements of this Standard.

CONTENTS

	<i>Page</i>
SECTION 1 SCOPE AND GENERAL	
1.1 SCOPE	4
1.2 NEW DESIGNS AND INNOVATIONS	4
1.3 APPLICATION	4
1.4 REFERENCED DOCUMENTS	4
1.5 DEFINITIONS	5
1.6 GENERAL REQUIREMENTS	8
1.7 STATIC PRESSURE CLASSIFICATION	9
1.8 GALVANIZED STEEL THICKNESS	9
1.9 TESTING	10
SECTION 2 DUCT CONSTRUCTION AND INSTALLATION	
2.1 DUCT WORK	11
2.2 DUCT SEALING	12
2.3 RECTANGULAR DUCT REINFORCEMENT	15
2.4 ROUND DUCT CONSTRUCTION	48
2.5 OVAL DUCT CONSTRUCTION	57
2.6 HANGERS AND SUPPORT SYSTEMS	59
2.7 DUCT LINERS AND INSULATION	67
2.8 FLEXIBLE DUCTWORK	69
SECTION 3 EXTERNAL EQUIPMENT INSTALLATION	
3.1 GENERAL	75
3.2 ROOF PENETRATIONS	75
3.3 CONNECTION TO EQUIPMENT	75
3.4 SEALING OF EXTERNAL DUCTWORK	75
SECTION 4 FUNCTIONAL CRITERIA	
4.1 DEFLECTION	82
4.2 MODELS FOR FUNCTIONAL STANDARDS	82
APPENDICES	
A PROCEDURE FOR RATING DUCT CONSTRUCTION METHODS RELATIVE TO THE CONSTRUCTION TABLES	84
B 'J' AND 'I' REINFORCEMENTS RELATED TO 'EI' VALUES	86
C ALLOWABLE LOADS FOR TRAPEZE ANGLES	87
D WEIGHTS AND AREAS OF RECTANGULAR GALVANIZED STEEL DUCTS	89
E WEIGHTS AND AREAS OF CIRCULAR GALVANIZED STEEL DUCTS	90
F FLEXIBLE DUCT REPORT SUMMARY	91
