

AS CISPR 16.3:2013
CISPR/TR 16-3, Ed. 3.1 (2012)
CISPR/TR 16-3:2004/AMD 1:2013
CISPR/TR 16-3:2004/AMD 2:2015
(Incorporating Amendment No. 1)

Specification for radio disturbance and immunity measuring apparatus and methods

Part 3: CISPR technical reports

This Australian Standard® was prepared by Committee TE-003, Electromagnetic Interference. It was approved on behalf of the Council of Standards Australia on 31 May 2013.

This Standard was published on 20 June 2013.

The following are represented on Committee TE-003:

- Australian Broadcasting Corporation
 - Australian Communications and Media Authority
 - Australian Industry Group
 - Australian Information Industry Association
 - Consumer Electronics Suppliers Association
 - Consumers Federation of Australia
 - Curtin University of Technology
 - Department of Defence, Australia
 - Electrical Compliance Testing Association
 - Energy Networks Association
 - Engineers Australia
 - Lighting Council New Zealand
 - Lighting Council of Australia
 - Ministry of Economic Development, New Zealand
 - National Measurement Institute
 - Wireless Institute Australia
-

This Standard was issued in draft form for comment as DR AS/NZS CISPR 16.3.

Standards Australia wishes to acknowledge the participation of the expert individuals that contributed to the development of this Standard through their representation on the Committee and through the public comment period.

Keeping Standards up-to-date

Australian Standards® are living documents that reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued.

Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments that may have been published since the Standard was published.

Detailed information about Australian Standards, drafts, amendments and new projects can be found by visiting www.standards.org.au

Standards Australia welcomes suggestions for improvements, and encourages readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.org.au, or write to Standards Australia, GPO Box 476, Sydney, NSW 2001.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TE-003, Electromagnetic Interference, to supersede AS/NZS CISPR 16.3:2004.

A1 | This Standard incorporates Australian Amendment No. 1, which was prepared by the Australian members of Joint Standards Australia/Standards New Zealand Committee TE-003, Electromagnetic Interference to add changes introduced by CISPR/TR 16-3:2004/AMD 2:2015. As a consequence of Amendment No. 1, which is published as an Australian-only amendment, the designation of this Standard has been changed from AS/NZS CISPR 16.3:2013 to AS CISPR 16.3:2013.

The objective of this Standard is to provide background and supporting information for the various other parts in the (AS/NZS) CISPR 16 series, including a historical reference on the measurement of interference power from household and similar appliances in the VHF range.

A1 | This Standard is identical with, and has been reproduced from, CISPR/TR 16-3, Ed. 3.1 (2012), *Specification for radio disturbance and immunity measuring apparatus and methods—Part 3: CISPR technical reports*. Edition 3.1 of CISPR/TR 16-3 incorporates Amendment 1 (2012). The amendments are indicated by marginal bars. This Standard includes CISPR/TR 16-3 Amendment No. 2 (September 2015). The changes required by Amendment No. 2 are added at the end of this Standard.

As this Standard is reproduced from an International Standard, the following applies:

- (a) In the source text ‘this part of CISPR 16’ should read ‘this Australian/New Zealand Standard’.
- (b) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

<i>Reference to International Standard</i>	<i>Australian/New Zealand Standard</i>
CISPR	AS/NZS CISPR
16 Specification for radio disturbance and immunity measuring apparatus and methods	16 Specification for radio disturbance and immunity measuring apparatus and methods
16-1-1 Part 1-1: Radio disturbance and immunity measuring apparatus—Measuring apparatus	16.1.1 Part 1.1: Radio disturbance and immunity measuring apparatus—Measuring apparatus

Only international references that have been adopted as Australian or Australian/New Zealand Standards have been listed.

The term ‘informative’ has been used in this Standard to define the application of the annex to which it applies. An ‘informative’ annex is only for information and guidance.

CONTENTS

1	Scope.....	16
2	Normative references	16
3	Terms, definitions and abbreviations	17
3.1	Terms and definitions	17
3.2	Abbreviations	20
4	Technical reports.....	20
4.1	Correlation between measurements made with apparatus having characteristics differing from CISPR characteristics and measurements made with CISPR apparatus	20
4.1.1	General	20
4.1.2	Critical interference-measuring instrument parameters	21
4.1.3	Impulse interference – correlation factors	23
4.1.4	Random noise	25
4.1.5	The root mean square (rms) detector.....	25
4.1.6	Discussion.....	25
4.1.7	Application to typical noise sources	25
4.1.8	Conclusions.....	26
4.2	Interference simulators	27
4.2.1	General	27
4.2.2	Types of interference signals	27
4.2.3	Circuits for simulating broadband interference	28
4.3	Relationship between limits for open-area test site and the reverberation chamber	32
4.3.1	General	32
4.3.2	Correlation between measurement results of the reverberation chamber and OATS	32
4.3.3	Limits for use with the reverberation chamber method	33
4.3.4	Procedure for the determination of the reverberation chamber limit	33
4.4	Characterization and classification of the asymmetrical disturbance source induced in telephone subscriber lines by AM broadcasting transmitters in the LW, MW and SW bands.....	34
4.4.1	General	34
4.4.2	Experimental characterization.....	34
4.4.3	Prediction models and classification	44
4.4.4	Characterization of the immunity-test disturbance source	47
4.5	Predictability of radiation in vertical directions at frequencies above 30 MHz.....	55
4.5.1	Summary.....	55
4.5.2	Range of application.....	56
4.5.3	General	56
4.5.4	Method used to calculate field patterns in the vertical plane	58
4.5.5	Limitations of predictability of radiation at elevated angles	59
4.5.6	Differences between the fields over a real ground and the fields over a perfect conductor.....	87
4.5.7	Uncertainty ranges	93
4.5.8	Conclusions.....	96
