

Australian Standard™

**Electricity metering equipment (ac)—
General requirements, tests and test
conditions**

**Part 21: Tariff and load control
equipment
(IEC 62052-21, Ed. 1.0 (2004) MOD)**

This Australian Standard was prepared by Committee EL-011, Electricity Metering Equipment. It was approved on behalf of the Council of Standards Australia on 19 January 2006.

This Standard was published on 15 February 2006.

The following are represented on Committee EL-011:

Australian Chamber of Commerce and Industry
Australian Electrical and Electronic Manufacturers Association
Electrical Regulatory Authorities Council
Electricity Engineers Association (New Zealand)
Energy Networks Association
Engineers Australia
Ministry of Economic Development (New Zealand)
NEMMCO
National Measurement Institute

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Web Shop at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Global Standard*, has a full listing of revisions and amendments published each month.

Australian Standards™ and other products and services developed by Standards Australia are published and distributed under contract by SAI Global, which operates the Standards Web Shop.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.org.au, or write to the Chief Executive, Standards Australia, GPO Box 476, Sydney, NSW 2001.

This Standard was issued in draft form for comment as DR 05139.

PREFACE

This Standard was prepared by the joint Standards Australia/Standards New Zealand Committee EL-011, Electricity Metering Equipment. After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to develop this Standard as an Australian, rather than an Australian/New Zealand Standard.

The objective of this Standard is to provide electricity utilities and manufacturers with type tests for tariff and load control equipment for electricity metering equipment.

This Standard is an adoption with national modifications and has been reproduced from IEC 62052-21, Ed.1.0 (2004), *Electricity metering equipment (ac)—General requirements, tests and test conditions—Part 21: Tariff and load control equipment*, and has been varied as indicated to take account of Australian climatic conditions and fundamental technological differences.

Variations to IEC 62052-21, Ed.1.0 (2004) are indicated at the appropriate places throughout this standard. Strikethrough (~~example~~) identifies IEC text, tables and figures which, for the purposes of this Australian Standard, are deleted. Where text, tables or figures are added, each is set in its proper place and identified by shading (example). Added figures are not themselves shaded, but are identified by a shaded border.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘part of IEC 62052’ should read ‘AS 62052.21’.
- (c) A full point should be substituted for a comma when referring to a decimal marker.

The terms ‘normative’ and ‘informative’ are used to define the application of the annex to which they apply. A normative annex is an integral part of a standard, whereas an informative annex is only for information and guidance.

CONTENTS

	<i>Page</i>
INTRODUCTION	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	4
3.1 General definitions	4
3.2 Definitions related to electronic ripple control receivers	4
3.3 Definitions related to the ripple control code and to the control element	6
3.4 Definitions related to time switches	7
3.5 Definitions related to the output elements	8
3.6 Definitions of mechanical elements	8
3.7 Definitions of insulations	9
3.8 Definitions of influence quantities	10
3.9 Definition of tests	11
4 Standard electrical values	11
4.1 Standard reference voltage (U_n)	11
4.2 Standard reference frequency (f_n)	11
5 Mechanical requirements and tests	12
5.1 General mechanical requirements	12
5.2 Case	12
5.3 Window	13
5.4 Terminals, terminal block(s), protective earth terminal	13
5.5 Terminal cover(s)	14
5.6 Clearance and creepage distances	15
5.7 Insulating encased tariff and load control equipment of protective class II	16
5.8 Resistance to heat and fire	16
5.9 Protection against penetration of dust and water	16
5.10 Void	17
5.11 Void	17
5.12 Marking of tariff and load control equipment	17
6 Climatic conditions, requirements and tests	18
6.1 Temperature range	18
6.2 Relative humidity	18
6.3 Tests of the effect of the climatic environments	18
7 Electrical requirements and tests	19
7.1 Supply voltage	19
7.2 Heating	21
7.3 Insulation	21
7.4 Output elements	23
7.5 Functional requirements and tests	27
7.6 Electromagnetic compatibility (EMC)	27
7.7 Radio interference suppression	30
8 Test conditions and type test	30
8.1 Test conditions	30
8.2 Type test	30
