AS/NZS 1102.107:1997

Australian/New Zealand Standard®

Graphical symbols for electrotechnical documentation

Part 107: Switchgear, controlgear and protective devices

[Based on and including the full text of IEC 617-7:1996, Graphical symbols for diagrams, Part 7: Switchgear, controlgear and protective devices]

AS/NZS 1102.107:1997

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TE/13, Symbols, Units and Quantities for Electrotechnology. It was approved on behalf of the Council of Standards Australia on 19 September 1997 and on behalf of the Council of Standards New Zealand on 19 September 1997. It was published on 5 December 1997.

The following interests are represented on Committee TE/13:

AirServices Australia The Association of Consulting Engineers, Australia Australian Chamber of Commerce & Industry Department of Employment & Technical & Further Education, S.A. Department of Defence, Australia Institution of Engineers, Australia Institution of Radio & Electronics Engineers, Australia Ministry of Commerce, New Zealand Queensland Mining Council Royal Melbourne Institute of Technology

Review of Standards. To keep abreast of progress in industry, Joint Australian/ New Zealand Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Joint Standards and related publications will be found in the Standards Australia and Standards New Zealand Catalogue of Publications; this information is supplemented each month by the magazines 'The Australian Standard' and 'Standards New Zealand', which subscribing members receive, and which give details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Joint Standards, addressed to the head office of either Standards Australia or Standards New Zealand, are welcomed. Notification of any inaccuracy or ambiguity found in a Joint Australian/New Zealand Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

Australian/New Zealand Standard®

Graphical symbols for electrotechnical documentation

Part 107: Switchgear, controlgear and protective devices

Originated in Australia in part as part of AS 1102.5—1972. Final Australian edition AS 1102.107—1989. Jointly revised and designated AS/NZS 1102.107:1997.

PUBLISHED JOINTLY BY:

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TE/13, Symbols, Units and Quantities for Electrotechnology. It is issued as a Joint Standard to supersede AS 1102.107—1989. It is based on but not equivalent to, and reproduced from, IEC 617-7, *Graphical symbols for diagrams*, Part 7: *Switchgear, controlgear and protective devices*.

The objective of this Standard is to provide users of electrotechnical documents with graphical symbols for switchgear, controlgear and protective devices for the purposes of uniformity and clarity in presenting electrotechnical diagrams.

The Part numbers in this series of Standards correspond to equivalent Parts in the IEC 617 series but with '100' added to the IEC 617 Part number. For example, for the Standard IEC 617-2 refer to AS/NZS 1102.102. The symbol numbers within this Standard are the same as the IEC 617 numbers. In AS 1102.101, *Graphical symbols for electrotechnical documentation*, Part 101: *General information and general index*, the first part of the symbol number refers to the Part number, e.g. in the index, for symbol 102-01-01, refer to Part 102, symbol 02-01-01.

In this Standard, Australian and New Zealand variations have been listed in Appendix ZA and accordingly, the source text should be amended, supplemented or replaced as required. The changes to the source text are indicated with a marginal bar against each clause, table, figure or part thereof affected. Appendix ZA provides symbols for use in Australia and New Zealand which are additional to or alternative to the IEC 617 symbols. The symbols are identified with an 'A' in the third part of the symbol number.

Appendix ZB contains information on the changes from the superseded Australian Standard to this Part of the Standard.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendix to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance.

As this Standard is reproduced from an international Standard, the following applies:

- (a) Its number appears on the cover and title page while the international Standard number appears only on the cover.
- (b) In the source text, 'this International Standard' should read 'this Australian/New Zealand Standard'.
- (c) A full point substitutes for a comma when referring to a decimal marker.

References to international Standards should be replaced by equivalent Australian or Australian/ New Zealand Standards as follows:

Reference	to International Standard	Australiar	n or Australian/New Zealand Standard
IEC		AS	
617	Graphical symbols for diagrams	1102	Graphical symbols for electrotechnical documentation
617-1	Part 1: General information, general index. Cross-reference tables	1102.101	Part 101: General information and general index

Please note that on the CD-ROM, only the English definitions are available. For the full version incorporating French terms, please refer to the hard copy.

CONTENTS

	Page
INTRODUC	ΤΙΟΝ
	CHAPTER I: GENERAL RULES
Section 1	Qualifying symbols
	CHAPTER II: CONTACTS
Section 2	Contacts with two or three positions 4
Section 3	Passing contacts with two positions
Section 4	Early and late operating contacts
Section 5	Contacts with delayed operation
Section 6	Automatic return and non-automatic return contacts
	CHAPTER III: SWITCHES, SWITCHGEAR AND STARTERS
Section 7	Single-pole switches
Section 8	Position switches
Section 9	Temperature sensitive switches
Section 10	(transferred to annex A1)
Section 11	Examples of multi-position switches, including control switches
Section 12	Block symbols for complex switches
Section 13	Power-switching devices
Section 14	Block symbols for motor starters
	CHAPTER IV: ALL-OR-NOTHING RELAYS
Section 15	Operating devices
	CHAPTER V: MEASURING RELAYS AND RELATED DEVICES
Section 16	Block symbol and qualifying symbols
Section 17	Examples of measuring relays
Section 18	Other devices
	CHAPTER VI: PROXIMITY AND TOUCH-SENSITIVE DEVICES
Section 19	Sensors and detectors
Section 20	Switches
	CHAPTER VII: PROTECTIVE DEVICES
Section 21	Fuses and fuse-switches
Section 22	Spark gaps and arresters
Section 23	(transferred to annex A3)
