

ASME MFC-3M-2004

[Revision of ASME MFC-3M-1989 (R1995)]

Measurement of Fluid Flow in Pipes Using Orifice, Nozzle, and Venturi

AN AMERICAN NATIONAL STANDARD

**The American Society of
Mechanical Engineers**

ASME MFC-3M-2004
[Revision of ASME MFC-3M-1989 (R1995)]

Measurement of Fluid Flow in Pipes Using Orifice, Nozzle, and Venturi

AN AMERICAN NATIONAL STANDARD

The American Society of
Mechanical Engineers

Three Park Avenue • New York, NY 10016

Date of Issuance: August 15, 2005

The 2004 edition of this Standard is being issued with an automatic addenda subscription service. The use of addenda allows revisions made in response to public review comments or committee actions to be published as necessary. This Standard will be revised when the Society approves the issuance of a new edition.

ASME issues written replies to inquiries concerning interpretations of technical aspects of this Standard. Interpretations are published on the ASME Web site under the Committee Pages at <http://www.asme.org/codes/> as they are issued.

ASME is the registered trademark of The American Society of Mechanical Engineers.

This code or standard was developed under procedures accredited as meeting the criteria for American National Standards. The Standards Committee that approved the code or standard was balanced to assure that individuals from competent and concerned interests have had an opportunity to participate. The proposed code or standard was made available for public review and comment that provides an opportunity for additional public input from industry, academia, regulatory agencies, and the public-at-large.

ASME does not “approve,” “rate,” or “endorse” any item, construction, proprietary device, or activity.

ASME does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to insure anyone utilizing a standard against liability for infringement of any applicable letters patent, nor assumes any such liability. Users of a code or standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

Participation by federal agency representative(s) or person(s) affiliated with industry is not to be interpreted as government or industry endorsement of this code or standard.

ASME accepts responsibility for only those interpretations of this document issued in accordance with the established ASME procedures and policies, which precludes the issuance of interpretations by individuals.

No part of this document may be reproduced in any form,
in an electronic retrieval system or otherwise,
without the prior written permission of the publisher.

CONTENTS

Foreword	v
Committee Roster	vi
Correspondence With the MFC Committee	vii
Part 1 General	1
1-1 Scope and Application	1
1-2 References and Related Documents	1
1-3 Symbols and Definitions	2
1-4 Principles of the Method of Measurement and Computation	5
1-5 General Requirements for Measurement	6
1-6 Installation Requirements	7
1-7 Uncertainties in the Measurement of Flow Rate	9
Figure	
1-1 “Triple-T” Arrangement	6
Table	
1-1 Symbols	3
Nonmandatory Appendices	
1A Iterative Computations	11
1B Examples of Values of Pipe Wall Uniform Equivalent Roughness, k	12
1C Flow Conditioners and Flow Straighteners	13
Part 2 Orifice Plates	18
2-1 Scope and Field of Application	18
2-2 References and Related Documents	18
2-3 Principles of the Method of Measurement and Computation	19
2-4 Orifice Plates	19
2-5 Installation Requirements	26
Figures	
2-1 Standard Orifice Plate	19
2-2 Orifice Plate Flatness Measurement	20
2-3 Spacing of Pressure Taps for Orifice Plates with D and $D/2$ Pressure Taps or Flange Taps	22
2-4 Corner Taps	23
2-5 Layout Including a Full Bore Valve for $\beta = 0.6$	28
2-6 Examples of Acceptable Installations	30
2-7 19-Tube Bundle Flow Straightener	31
2-8 Examples of Installations With a 19-Tube Bundle Flow Straightener Downstream of a Single Bend	33
2-9 Zanker Flow Conditioner Plate	34
Tables	
2-1 Maximum Value of $10^4 R_a/D$	24
2-2 Minimum Value of $10^4 R_a/D$ (When Required)	24
2-3 Required Straight Lengths Between Orifice Plates and Fittings Without Flow Conditioners	27

2-4	Permitted Range of Straight Lengths Between Orifice Plate and 19-Tube Bundle Flow Straightener (1998) Downstream of Fittings Located at Distance, L_f , From the Orifice Plate	32
Nonmandatory Appendix		
2A	Tables of Discharge Coefficients and Expansibility Factors	37
Part 3 Nozzles and Venturi Nozzles		
3-1	Scope and Field of Application	49
3-2	References and Related Documents	49
3-3	Principles of the Method of Measurement and Computation	49
3-4	Nozzles and Venturi Nozzles	50
3-5	Installation Requirements	59
Figures		
3-1	ISA 1932 Nozzle	50
3-2	Long Radius Nozzles	54
3-3	Venturi Nozzle	56
3-4	Venturi Nozzle, Pressure Taps	58
3-5	Pressure Loss Across a Venturi Nozzle	59
3-6	Layout Including a Full Bore Valve for $\beta = 0.6$	62
3-7	Examples of Acceptable Installations	63
Tables		
3-1	Upper Limits of Relative Roughness of the Upstream Pipe for ISA 1932 Nozzles ...	52
3-2	Upper Limits of Relative Roughness of the Upstream Pipe for Venturi Nozzles ...	58
3-3	Required Straight Lengths for Nozzles and Venturi Nozzles	60
Nonmandatory Appendix		
3A	Tables of Discharge Coefficients and Expansibility Factors	65
Part 4 Venturi Meters		
4-1	Scope and Field of Application	68
4-2	References and Related Documents	68
4-3	Principles of the Method of Measurement and Computation	68
4-4	ASME Venturi Tubes	69
4-5	Installation Requirements	74
Figures		
4-1	Geometric Profile of the ASME Venturi Tube	70
4-2	Pressure Loss Across an ASME Venturi Tube	74
4-3	Layout Including a Full Bore Valve for $\beta = 0.6$	76
4-4	Examples of Acceptable Installations	77
Table		
4-1	Required Straight Lengths for Classical Venturi Tubes	75
Nonmandatory Appendices		
4A	Tables of Expansibility Factors	79
4B	ASME Venturi Meters Used Outside the Scope of MFC-3M-2004	80
4C	Pressure Loss in ASME Venturi Meters	82
