CONTENTS

FOREWORD		4
Clauses		
1. SCOPE		5
2. DEFINITIONS		5
2.1 Component		5
2.2 Deviation		5
2.3 Doorset		5
2.4 Door leaf		5
2.5 Flush door		5
2.6 Performance		5
2.7 Performance requirements		5
2.8 Performance test		5
2.9 Size		5
2.10 Work size		5
3. TESTING AND SAMPLING PROCEDURE		5
3.1 Sampling rate		5
3.2 Order of testing		6
4. GENERAL		6
4.1 Conditioning of timber doors		6
4.2 Testing		6
5. ACCURACY OF DIMENSIONS		6
5.1 General		6
5.2 Measurement of height		7
5.3 Measurement of width		7
5.4 Measurement of thickness		7
5.5 Measurement of defects of squareness		7
5.6 Accuracy of measurement		8
5.7 Statement of results		8
6. MEASUREMENT OF FLATNESS		8
6.1 General flatness		8
6.2 Local flatness		9
7. RESISTANCE TO TORSION		9
7.1 Introduction		9
7.2 Method of test		9
7.3 Accuracy of measurement		10
7.4 Statement of results		10
8. STRENGTH IN THE PLANE OF THE LEAF		10
8.1 Introduction		10
8.2 Method of test		10
8.3 Accuracy of measurement		10
8.4 Statement of results		11
9. RESISTANCE TO SLAMMING		11
9.1 Introduction		11
9.2 Method of test		11
9.3 Statement of results		11

10.	RESISTANCE TO ABUSE	12
10.1	Introduction	12
10.2	Method of test	12
10.3	Statement of result	12
11.	HARDBODY IMPACT	12
11.1	Introduction	12
11.2	Apparatus	12
11.3	Method of test	12
11.4	Test criteria	14
11.5	Statement of results	14
12.	HEAVYBODY IMPACT	14
12.1	Introduction	14
12.2	Test apparatus	14
12.3	Method of test	15
12.4	Statement of result	15
13.	METHOD FOR DETERMINATION OF COMPRESSIVE STRENGTH OF CELLULAR INFILL MATERIAL FOR DOORS	15
13.1	Scope	15
13.2	Principle	15
13.3	Apparatus	15
13.4	Test pieces	15

Tables

1.	Maximum levels of deflection under torsional force	10
2.	Energy levels for hardbody impact	14
3.	Energy levels for heavybody impact	15
4.	Door grades for various types of duty	16

Figures

1.	Door leaf measurements	7
2.	Determination of squareness	7
3.	Bow, cup and twist	8
4.	Method of mounting door for tests in accordance with Clauses 7 and 8	9
5.	Arrangement for slamming test	11
6.	Resistance to abuse	12
7.	Position of impact points for hardbody test	13
8.	Arrangement for heavybody impact test	14

Appendix

A	Grading of doors	16

FOREWORD

This is a provisional specification for methods of testing doors. It is a companion document to I.S. 196: Part 1 "Wood Doorsets—Dimensions", and I.S. 196P: Part 2: 1980 "Flush Wood Door Leaves (Internal)".

The tests in this specification are mainly of a performance type. While this is a companion document to I.S. 196P: Part 2, many of the tests in it are applicable to doors other than those covered by that specification. The range of the tests is limited to those which have been carried out at this Institute. For instance tests dealing with insulation properties or behaviour under various conditions of humidity are not included, as the Institute is not yet in a position to perform them. It is hoped to expand the scope of this specification at a later date to include further tests and give more information on the tests, given in the present draft.

CEN (the European Committee for Standardization) has published some test methods for doors and has others in course of preparation. These have been used in this specification.

The remaining tests are based on information obtained from Britain. In this case the tests have been modified where necessary to suit Irish conditions.

Initially this specification will be a provisional standard. Provisional standards will be reviewed after 12 months. They will then be published as conventional standards taking into account experience gained from their use.
