FOREWORD

This code of practice has been formulated by the Installation Technical Committee IC2 of the Gas Technical Standards Committee under whose direction the code was prepared, in order to meet the need for appropriate procedures to be used for the Installation of gas fired spaceheaters in non-domestic premises including places of public assembly.

This code represents an accepted standard of good practice but compliance with it does not confer immunity from relevant legal requirements, national building regulations, and local bye-laws.

Nothing in this document shall be interpreted so as to prevent the use of future technical developments where such new techniques can be shown to provide equivalent or better levels of safety.
