33	Protection against damage during construction	96
34	Supervision	97

Contents (continued)	Page
Appendices	
A. Determination of movement in masonry	99
B. Masonry bonds and joint finishes	109
C. Structural design procedure for wall ties	113
D. Use of replacement wall ties	116
E. Durability designations of bricks	120
Tables	
1. Anchorages, dowels and fixings	6
2a. Sills	8
2b. Lintels	8
3. Copings	9
4. Flashings and weatherings	10
5. Insulation materials	10
6. Selection of materials for masonry	13
7. Height to thickness ratio for freestanding single-leaf walls without piers	14
8. Part 1 Maximum permitted areas of certain walls.	22
8. Part 2 Maximum permitted areas of certain walls.	23
9a. Spacing of wall ties.	34
9b. Maximum panel dimensions.	35
10. Classification of exposure to local wind-driven rain.	44
11a. Assessment of resistance to rain penetration - thickness of single-leaf walls with or without rendering.	49
11b. Factors affecting raid penetration of cavity walls.	50
12. Physical properties and performance of materials for damp-proof courses.	54
13. Durability of masonry in finished construction.	66-71
14. Protection of metal components (other than wall ties) built into masonry.	72
15. Mortar designations and types.	73
16a. Solid masonry walls exposed to fire from one side at a time.	76
16b. Hollow masonry walls exposed to fire from one side at a time.	76
16c. Masonry cavity walls exposed to fire from one side at a time.	77
A.1 Linear thermal movement of masonry units and mortar.	100
A.2 Standard 'test' fire time/expansion relationships for typical elements of construction.	102
A.3 Moisture movement of concrete and calcium silicate masonry units.	103
A.4 Shrinkage of mortars due to change in moisture content.	104
C.1 Values of λ_{me} .	114
D.1 Replacement wall ties - selection of all tie types.	118
E.1 Designations of durability of bricks.	120

Preface

This Part of I.S. 325 is a code of practice dealing with the materials and workmanship aspects of masonry construction. The structural design of unreinforced masonry is dealt with in I.S. 325:Part 1. It was prepared under the direction of the National Standards Authority of Ireland.

I.S. 325:Parts 1 and 2 are based on BS 5628:Parts 1 and 3 respectively. The preparation of I.S. 325:Part 2 has taken Irish conditions into account.

Where methods of construction are not covered by this standard or by any other Irish Standard, this should not be regarded as discouraging their use. The designer must be satisfied (by reference to appropriate manufacturer's literature and test reports issued by accredited authorities) that the materials and methods to be employed are such as to ensure a level of performance at least equal to that recommended in this standard.
