English version

Installations for oil supply systems for oil burners - Part 1: Safety requirements and tests ; Parts, oil feed pumps, control and safety devices, supply tanks

Installations des systèmes d'alimentation de fioul pour les brûleurs de fioul domestique - Partie 1: Prescriptions de sécurité et essais ; Composants, pompes d'alimentation de fioul domestique, systèmes de contrôle et de sécurité, réservoir d'alimentation

Ölversorgungsanlagen für Ölbrenner - Teil 1: Sicherheitstechnische Anforderungen und Prüfungen ; Bauelemente, Ölförderaggregate, Regel- und Sicherheitseinrichtungen, Ölversorgungsbehälter

This European Standard was approved by CEN on 21 July 1999.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This European Standard has been prepared by Technical Committee CEN/TC 47 "Atomizing oil burners and their components - Function - Safety - Testing", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by September 2000, and conflicting national standards shall be withdrawn at the latest by September 2000.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

1 Scope

This standard applies to parts, oil feed pumps, oil supply tanks and corresponding control and safety devices of oil supply installations for automatic supply of one or more oil burners or oil consuming units with light fuel oil (maximum viscosity of 10 mm²/s at a temperature of 20 °C) from one or more central storage tanks under static or dynamic pressure. This standard covers all the above mentioned components between the connection to one or more tanks and the connection to oil burners or oil consuming units, including the direct series-connected shut-off devices. EN 12514-2 covers technical safety requirements and tests for parts, valves, pipes, filters, oil de-aerators and meters.

This standard specifies the safety requirements and corresponding tests for all parts, oil feed pump units, oil supply tanks and their control and safety devices within an oil supply installation.

2 Normative references

This European Standard incorporates, by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies.

3 Definitions

For the purposes of this standard the following definitions apply:

3.1 Oil feed pump: device for pumping fuel oil from the oil storage tank to the oil burners or oil consuming units connected to the oil supply installation.

3.2 Control and safety devices

3.2.1 Control devices

3.2.1.1 Pressure control: device for opening and closing the oil supply to the oil pressure regulating tank depending on the oil pressure, see figure 1.1 oil
2 air (gas)a p OFF
b p ON**Figure 1: Device for opening and closing the oil supply to the oil pressure regulating tank depending on the oil pressured****3.2.1.2 Level control:** device for opening and closing the oil supply to the oil service tank depending on its oil level, see figure 2.

Figure 2: Device for opening and closing the oil supply to the oil service tank depending on its oil level

3.2.2 Safety devices

3.2.2.1 High limit controller: device which operates upon exceeding the preset limit values of the control device (pressure or level control), see figure 3.

Figure 3: Device which operates upon exceeding the preset limit values of the control device (pressure or level control)
