Foreword	3
1 Scope	4
2 References	4
3 Terms and definitions	5
4 Symbols and units	6
5 Need for ventilation in dwellings (residences)	6
6 Design assumptions for residential ventilation	9
7 Performance requirements for ventilation systems	10
8 Design rules for residential ventilation systems	22
9 Specification and documentation	27
Annex A (informative) Residential pollutant production rates	28
Annex B (informative) The relationship between humidity and temperature and use of the psychrometric chart	31
Annex C (informative) Method of calculating water vapour absorption effect	33
Annex D (informative) Residential ventilation systems and their interaction with the dwelling	35
Annex E (informative) Calculation methods for ventilation requirements	40
Annex F (informative) Examples of assumptions and resulting calculated values for ventilation air flow rates	43
Annex G (informative) Noise	52
Annex H (informative) Nomograph for calculating air flow rate to reduce the risk of surface condensation occurring on the inner wall surface for various wall U-values and ambient air conditions	59
Bibliography	61

Foreword

This Technical Report (CEN/TR 14788:2006) has been prepared by Technical Committee CEN/TC 156 “Ventilation of buildings”, the secretariat of which is held by BSI.

CEN/TR 14788:2006 (E)

1 Scope

This Technical Report specifies recommendations for the performance and design of ventilation systems which serve single family, multi family and apartment type dwellings during both summer and winter. It is of particular interest to architects, designers, builders and those involved with implementing national, regional and local regulations and standards.

Four basic ventilation strategies are covered; natural ventilation, fan assisted supply air ventilation, fan assisted exhaust air ventilation and fan assisted balanced air ventilation. Combinations of these systems are not excluded and a ventilation system may serve only one dwelling (*individual system*) or more than one dwelling (*central system*). The ventilation aspects of combined systems (ventilation with heating and/or cooling) are covered.

The ventilation of garages, common spaces, roof voids, sub-floor voids, wall cavities and other spaces in the structure, under, over or around the living space are not covered.

Ventilation systems covered by this Technical Report may affect the entry and dilution of radon and other gases from the ground but these effects are not covered in this Technical Report. Ventilation systems designed to reduce the entry of radon and other gases from the ground are not covered by this Technical Report.

2 References

The following referenced documents are indispensable for the application of this Technical Report. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 779, *Particulate air filters for general ventilation — Determination of the filtration performance*

EN 1507, *Ventilation for buildings — Sheet metal air ducts with rectangular section — Requirements for strength and leakage*

ENV 12097, *Ventilation for buildings — Ductwork — Requirements for ductwork components to facilitate maintenance of ductwork systems*

EN 12236, *Ventilation for buildings — Ductwork hangers and supports — Requirements for strength*

EN 12237, *Ventilation for buildings — Ductwork — Strength and leakage of circular sheet metal ducts*

EN 12792:2003, *Ventilation for buildings — Symbols, terminology and graphical symbols*

EN 13141-1, *Ventilation for buildings — Performance testing of components/products for residential ventilation — Part 1: Externally and internally mounted air transfer devices*

EN 13465, *Ventilation for buildings — Calculation methods for the determination of air flow rates in dwellings*

EN 14134, *Ventilation for buildings — Performance testing and installation checks of residential ventilation systems*

EN 13779, *Ventilation for non-residential buildings — Performance requirements for ventilation and room conditioning systems*

EN 20140-10, *Acoustics — Measurement of sound insulation in building and building elements — Part 10: Laboratory measurement of airborne sound insulation of small building elements (ISO 140-10:1991)*

EN ISO 140-3, *Acoustics — Measurement of sound insulation in buildings and of building elements — Part 3: Laboratory measurement of airborne sound insulation of building elements (ISO 140-3:1995)*

EN ISO 10211-1, *Thermal bridges in building construction — Heat flow and surface temperatures — Part 1: General calculation method (ISO 10211-1:1995)*
