allgemein verwendbare Auflistung von vordefinierten
Regeln

This Technical Specification (CEN/TS) was approved by CEN on 4 March 2006 for provisional application.

The period of validity of this CEN/TS is limited initially to three years. After two years the members of CEN will be requested to submit their comments, particularly on the question whether the CEN/TS can be converted into a European Standard.

CEN members are required to announce the existence of this CEN/TS in the same way as for an EN and to make the CEN/TS available promptly at national level in an appropriate form. It is permissible to keep conflicting national standards in force (in parallel to the CEN/TS) until the final decision about the possible conversion of the CEN/TS into an EN is reached.

CEN members are the national standards bodies of Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This Technical Specification (CEN/TS 14014:2006) has been prepared by Technical Committee CEN/TC 331 "Postal services", the secretariat of which is held by NEN.

This Technical Specification supersedes ENV 14014:2001. An explanation of the differences between this Technical Specification and ENV 14014 is given in Annex C.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to announce this CEN Technical Specification: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

CEN/TS 14014:2006 (E)

Introduction

Hybrid Mail is the technology whereby input in one communication medium is converted for delivery on another communication medium according to the sender's instructions and/or the recipient's capabilities. The typical application of Hybrid Mail is to provide a Hybrid Mail operator with printing data as well as processing and delivery instructions, and request the operator to secure the print, enveloping and delivery of the physical letters. Hybrid Mail operators may also exchange data.

The transfer of data to a Hybrid Mail operator or between Hybrid Mail operators requires that the printing data be linked to a number of data items related to the management, production, finishing etc. of the data to be printed. Such data items secure that all relevant information is accompanying the printing data. Also it will enable the Hybrid Mail operator to automate his processes with customers and other Hybrid Mail operators.

There is a need for a standardised yet flexible way to present the data to the Hybrid Mail operator or to exchange data between Hybrid Mail operators. This will enable customers and Hybrid Mail operators to have a seamless exchange of information. It will allow makers of applications for document creation (letters, marketing mailing etc.) and output management from other applications (accounting systems, production management etc.), to add here to the same data presentment and to offer the seamless data interchange.
