EUROPEAN STANDARD

EN 15530

NORME EUROPÉENNE

EUROPÄISCHE NORM

January 2008

ICS 77.150.10

English Version

Aluminium and aluminium alloys - Environmental aspects of aluminium products - General guidelines for their inclusion in standards

Aluminium et alliages d'aluminium - Aspects
environnementaux des produits d'aluminium - Lignes
directrices générales pour leur intégration dans les normes

Aluminium und Aluminiumlegierungen - Umweltaspekte von
Aluminiumerzeugnissen - Allgemeine Leitlinien für ihre
Berücksichtigung in Normen

This European Standard was approved by CEN on 21 December 2007.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword.....	3
Introduction	4
1 Scope	5
2 Normative references	5
3 Terms and definitions	5
4 General guidance.....	6
4.1 Practical procedure on how to introduce provisions dealing with environmental aspects into European Standards	6
4.2 Life cycle approach for aluminium products	7
4.3 Techniques for identifying and assessing environmental impacts	7
4.4 Heavy metals and other hazardous substances	7
5 Overview of environmental aspects of aluminium products in different applications	8
5.1 General.....	8
5.2 Aluminium products for transport application	8
5.3 Aluminium products for building and construction.....	9
5.4 Aluminium products for packaging applications	10
5.5 Aluminium products for other applications	10
Annex A (informative) Guidance how to treat aluminium in life cycle assessments	11
A.1 General requirements of EN ISO 14044	11
A.2 Treatment of energy flows	11
A.3 Treatment of recycling	12
Annex B (informative) Checklist addressing environmental aspects.....	16
B.1 General.....	16
B.2 Identification of environmental aspects of the product life cycle by means of the CEN temporary checklist (Step 1)	16
B.3 Environmental checklist to be attached to all draft standards sent out for CEN/TC Technical Enquiry, CEN Enquiry and Formal Vote	17
B.4 Identification of environmental impacts that can be influenced by the European Standard (step 2)	18
B.5 Final consideration of environmental aspects in the European Standard (step 3)	18
B.6 Example 1: aluminium products in the mass transport sector.....	19
B.7 Example 2: aluminium products in the building sector.....	20
Bibliography	23

Foreword

This document (EN 15530:2008) has been prepared by Technical Committee CEN/TC 132 “Aluminium and aluminium alloys”, the secretariat of which is held by AFNOR. Within its program of work, Technical Committee CEN/TC 132 entrusted CEN/TC 132/WG 14 “General support” to prepare this document.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by July 2008, and conflicting national standards shall be withdrawn at the latest by July 2008.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

Introduction

European standards often deal with aspects of trade, quality, health and the safety of products, processes or services. By additionally considering environmental aspects, European standardization is extended to the frame of sustainable development.

General guidance for the inclusion of environmental aspects in product standards is given by CEN Guide 4. This Guide covers the consideration of environmental aspects in standards dealing with aluminium products and is intended for standard writers. The aim of CEN Guide 4 is to provide a helpful tool for technical experts in the production chain of the aluminium product, who are involved in standardization, but are not necessarily environmental experts.

The purpose of CEN Guide 4 is:

- a) to describe the environmental aspects in product standards;
- b) to outline the relationship between product standards and the environment;
- c) to help avoid provisions in product standards that may lead to adverse environmental impacts;
- d) to emphasize that addressing environmental aspects during the development of product standards is a complex process and requires balancing competing priorities;
- e) to recommend the use of life cycle thinking and recognized scientific techniques when addressing environmental aspects of a product being standardized.

CEN Guide 4 states that it is supplemented by sectorial guides in order to reflect the diversity of environmental impacts that products may have. This European Standard may be considered as such a sectorial guide, as it considers aluminium products as a product sector for different applications (e.g. vehicles, building, packaging etc.). It is based on the expertise of representatives of the aluminium industry with environmental knowledge.

Depending on the way a European Standard is written, the provisions included and those omitted, the environmental impact of those products and processes may be influenced. The experts writing or revising European Standards should be aware of the relevance of environmental aspects and possible environmental impacts. In order to achieve this, guidance on how to take environmental issues systematically into account should be given.
