EUROPEAN STANDARD

EN 15316-3-2

NORME EUROPÉENNE

EUROPÄISCHE NORM

October 2007

ICS 91.140.10

English Version

Heating systems in buildings - Method for calculation of system
energy requirements and system efficiencies - Part 3-2:
Domestic hot water systems, distribution

Systèmes de chauffage dans les bâtiments - Méthode de
calcul des besoins énergétiques et des rendements des
systèmes - Partie 3-2 : Systèmes de production d'eau
chaude sanitaire, distribution

Heizungsanlagen in Gebäuden - Verfahren zur Berechnung
der Energieanforderungen und Nutzungsgrade der Anlagen
- Teil 3-2: Trinkwassererwärmung, Verteilung

This European Standard was approved by CEN on 18 August 2007.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword.....	4
Introduction	6
1 Scope	7
2 Normative references	7
3 Terms and definitions	7
4 Symbols, units and indices	10
5 Domestic hot water system characteristics.....	11
5.1 General.....	11
5.2 Single zone and single system.....	12
5.3 Single zone and multiple systems	12
5.4 Multiple zones with single system	13
6 Distribution thermal losses	13
6.1 Total distribution thermal losses	13
6.2 Thermal losses from individual distribution pipe section.....	14
6.2.1 General.....	14
6.2.2 Thermal losses from pipes based on dwelling area	14
6.2.3 Thermal losses from pipes based on pipe lengths and number of tappings per day.....	15
6.2.4 Thermal losses from pipes based on pipe lengths and distribution efficiencies.....	15
6.2.5 Thermal losses from pipes based on pipe lengths and tapping profiles	16
6.2.6 Thermal losses from pipes based on pipe lengths and average temperature	16
6.2.7 Heat energy lost due to wasted hot water.....	16
6.2.8 Time periods.....	16
6.3 Thermal losses from circulation loop.....	16
6.3.1 General.....	16
6.3.2 Thermal losses from circulation loop based on pipe length and a fixed value of heat loss	16
6.3.3 Thermal losses from circulation loop based on a physical approach	17
6.3.4 Additional thermal losses from circulation loop during periods of no circulation	17
6.3.5 Total thermal loss from circulation loop	17
6.4 Thermal losses due to accessories	18
6.5 User outlets	18
7 Auxiliary energy	18
7.1 Total auxiliary energy consumption	18
7.2 Auxiliary energy consumption for ribbon heating	18
7.3 Auxiliary energy consumption for pumps	19
7.3.1 General.....	19
7.3.2 Simplified method.....	19
7.3.3 Detailed calculation method	20
8 Recoverable, recovered and unrecoverable system losses	20
Annex A (informative) Calculation of thermal losses from pipes based on pipe lengths and the number of tappings per day	22
Annex B (informative) Calculation of thermal losses from pipes based on pipe lengths and distribution efficiencies	24
Annex C (informative) Calculation of thermal losses from pipes based on pipe lengths and tapping profiles	26
Annex D (informative) Calculation of thermal losses from circulation loop	28

D.1	Calculation of thermal losses based on pipe length	28
D.2	Thermal losses based on a detailed calculation method.....	28
D.2.1	General	28
D.2.2	Determination of length of pipe sections.....	28
D.2.3	Determination of heat transfer coefficients	31
D.2.4	Tabulated method for calculation of linear thermal transmittance	33
D.2.5	Determination of average ambient temperature.....	34
D.2.6	Determination of average hot water temperature of pipe section.....	34
Annex E	(informative) Calculation of thermal losses from user outlets	35
Annex F	(informative) Calculation of auxiliary energy requirement of a circulation pump	36
F.1	Simplified method for calculation of auxiliary energy requirement of a circulation pump	36
F.2	Detailed method for calculation of auxiliary energy requirement of a circulation pump	36
F.2.1	Hydraulic energy requirement	36
F.2.2	Hydraulic power required by the pump.....	36
F.2.3	Duration of the provision of domestic hot water	37
F.2.4	Pump performance coefficient.....	38
F.2.5	Intermittent pump operation.....	39
F.2.6	Expenditure value coefficient	39
F.3	Auxiliary energy recoverable factor	40
Bibliography	41

EN 15316-3-2:2007 (E)

Foreword

This document (EN 15316-3-2:2007) has been prepared by Technical Committee CEN/TC 228 "Heating systems in buildings", the secretariat of which is held by DS.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by September 2008, and conflicting national standards shall be withdrawn at the latest by September 2008.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association (Mandate M/343), and supports essential requirements of EU Directive 2002/91/EC on the energy performance of buildings (EPBD). It forms part of a series of standards aimed at European harmonisation of the methodology for calculation of the energy performance of buildings. An overview of the whole set of standards is given in prCEN/TR 15615.

The subjects covered by CEN/TC 228 are the following:

- design of heating systems (water based, electrical etc.);
- installation of heating systems;
- commissioning of heating systems;
- instructions for operation, maintenance and use of heating systems;
- methods for calculation of the design heat loss and heat loads;
- methods for calculation of the energy performance of heating systems.

Heating systems also include the effect of attached systems such as hot water production systems.

All these standards are systems standards, i.e. they are based on requirements addressed to the system as a whole and not dealing with requirements to the products within the system.

Where possible, reference is made to other European or International Standards, a.o. product standards. However, use of products complying with relevant product standards is no guarantee of compliance with the system requirements.

The requirements are mainly expressed as functional requirements, i.e. requirements dealing with the function of the system and not specifying shape, material, dimensions or the like.

The guidelines describe ways to meet the requirements, but other ways to fulfil the functional requirements might be used if fulfilment can be proved.

Heating systems differ among the member countries due to climate, traditions and national regulations. In some cases requirements are given as classes so national or individual needs may be accommodated.

In cases where the standards contradict with national regulations, the latter should be followed.
