EUROPEAN STANDARD

EN 15316-2-1

NORME EUROPÉENNE

EUROPÄISCHE NORM

July 2007

ICS 91.140.10

English Version

Heating systems in buildings - Method for calculation of system energy requirements and system efficiencies - Part 2-1: Space heating emission systems

Systèmes de chauffage dans les bâtiments - Méthode de calcul des besoins énergétiques et des rendements des systèmes - Partie 2-1 : Systèmes d'émission de chauffage des locaux

Heizungsanlagen in Gebäuden - Verfahren zur Berechnung der Energieanforderungen und Nutzungsgrad der Anlagen - Teil 2-1: Wärmeübergabesysteme für die Raumheizung

This European Standard was approved by CEN on 24 June 2007.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword.....	4
Introduction	6
1 Scope	7
2 Normative references	7
3 Terms and definitions, symbols and units.....	7
3.1 Terms and definitions	7
3.2 Symbols and units	9
4 Relation to other EPBD-standards.....	10
5 Principle of the method.....	12
5.1 Energy calculation	12
5.2 Thermal energy required for heat emission.....	12
5.3 Auxiliary energy $W_{em,aux}$	13
5.4 Recoverable system thermal losses $Q_{em,ls,rbl}$ and non-recoverable system thermal losses $Q_{em,ls,nrbl}$	13
5.5 Heat demand for space heating, building heat requirement Q_H	13
5.6 System thermal losses $Q_{em,ls}$	14
5.7 Calculation periods.....	14
5.8 Splitting or branching of the space heating system	14
6 Energy calculation for a heat emission system	14
6.1 General.....	14
6.2 Heat loss due to non-uniform temperature distribution	15
6.3 Heat loss due to embedded surface heating devices	16
6.4 Heat loss due to control of the indoor temperature.....	16
6.5 Auxiliary energy, $W_{em,aux}$	17
7 Recommended calculation methods	17
7.1 General.....	17
7.2 Method using efficiencies	18
7.3 Method using equivalent increase in internal temperature.....	18
Annex A (informative) Energy losses of the heat emission system, adapted from German regulation DIN 18599	20
A.1 Heat emission.....	20
A.2 Efficiencies for free heating surfaces (radiators); room heights ≤ 4 m	22
A.3 Efficiencies for component integrated heating surfaces (panel heaters) (room heights ≤ 4 m).....	24
A.4 Efficiencies for electrical heating (room heights ≤ 4 m).....	26
A.5 Efficiencies air heating (non-domestic ventilation systems) (room heights ≤ 4 m)	27
A.6 Efficiencies for room spaces with heights ≥ 4 m (large indoor space buildings).....	28
A.7 Efficiencies for room spaces with heights > 10 m	29
Annex B (informative) Equivalent increase in internal temperature - adapted from the French regulation RT2005.....	31
B.1 General.....	31
B.2 Zones	31
B.3 Spatial variation of temperature due to stratification	31
B.4 Variation of temperature due to control	32

Annex C (informative) Auxiliary energy	34
C.1 General	34
C.2 Large indoor space buildings ($h > 4$ m)	35
Bibliography	38

EN 15316-2-1:2007 (E)

Foreword

This document (EN 15316-2-1:2007) has been prepared by Technical Committee CEN/TC 228 "Heating systems in buildings", the secretariat of which is held by DS.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by January 2008, and conflicting national standards shall be withdrawn at the latest by January 2008.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association (Mandate M/343), and supports essential requirements of EU Directive 2002/91/EC on the energy performance of buildings (EPBD). It forms part of a series of standards aimed at European harmonisation of the methodology for calculation of the energy performance of buildings. An overview of the whole set of standards is given in prCEN/TR 15615.

The subjects covered by CEN/TC 228 are the following:

- design of heating systems (water based, electrical etc.);
- installation of heating systems;
- commissioning of heating systems;
- instructions for operation, maintenance and use of heating systems;
- methods for calculation of the design heat loss and heat loads;
- methods for calculation of the energy performance of heating systems.

Heating systems also include the effect of attached systems such as hot water production systems.

All these standards are systems standards, i.e. they are based on requirements addressed to the system as a whole and not dealing with requirements to the products within the system.

Where possible, reference is made to other European or International Standards, a.o. product standards. However, use of products complying with relevant product standards is no guarantee of compliance with the system requirements.

The requirements are mainly expressed as functional requirements, i.e. requirements dealing with the function of the system and not specifying shape, material, dimensions or the like.

The guidelines describe ways to meet the requirements, but other ways to fulfil the functional requirements might be used if fulfilment can be proved.

Heating systems differ among the member countries due to climate, traditions and national regulations. In some cases requirements are given as classes so national or individual needs may be accommodated.

In cases where the standards contradict with national regulations, the latter should be followed.

EN 15316 *Heating systems in buildings — Method for calculation of system energy requirements and system efficiencies* consists of the following parts:

Part 1: General
