This European Standard was approved by CENELEC on 2009-02-01. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the Central Secretariat has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

Foreword

The text of document 86B/2772/FDIS, future edition 3 of IEC 61300-2-2, prepared by SC 86B, Fibre optic interconnecting devices and passive components, of IEC TC 86, Fibre optics, was submitted to the IEC-CENELEC parallel vote and was approved by CENELEC as EN 61300-2-2 on 2009-02-01.

This European Standard supersedes EN 61300-2-2:2003.

Specific technical changes from EN 61300-2-2:2003 include a mating durability test for a plug-socket configuration, a new measurement condition and a new severity level.

The following dates were fixed:

- latest date by which the EN has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2009-11-01
- latest date by which the national standards conflicting with the EN have to be withdrawn (dow) 2010-02-01

Annex ZA has been added by CENELEC.

Endorsement notice

The text of the International Standard IEC 61300-2-2:2009 was approved by CENELEC as a European Standard without any modification.

In the official version, for Bibliography, the following note has to be added for the standard indicated:

IEC 61300-1 NOTE Harmonized as EN 61300-1:2003 (not modified).

Annex ZA (normative)

Normative references to international publications with their corresponding European publications

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

NOTE When an international publication has been modified by common modifications, indicated by (mod), the relevant EN/HD applies.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**FIBRE OPTIC INTERCONNECTING
DEVICES AND PASSIVE COMPONENTS –
BASIC TEST AND MEASUREMENT PROCEDURES –**

Part 2-2: Tests – Mating durability

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with an IEC Publication.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61300-2-2 has been prepared by subcommittee 86B: Fibre optic interconnecting devices and passive components, of IEC technical committee 86: Fibre optics.

This third edition cancels and replaces the second edition, published in 2003, and constitutes a technical revision. Specific technical changes from the previous edition include a mating durability test for a plug-socket configuration, a new measurement condition and a new severity level.

The text of this standard is based on the following documents:

FDIS	Report on voting
86B/2772/FDIS	86B/2804/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of IEC 61300 series, published under the general title *Fibre optic interconnecting devices and passive components – Basic test and measurement procedures*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the maintenance result date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

FIBRE OPTIC INTERCONNECTING DEVICES AND PASSIVE COMPONENTS – BASIC TEST AND MEASUREMENT PROCEDURES –

Part 2-2: Tests – Mating durability

1 Scope

The purpose of this part of IEC 61300 is to evaluate the effects of a number of successive cycles of engagement and separation of fibre optic connectors or other interconnecting devices on optical performance and mechanical degradation of the component under normal usage conditions.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 61300-3-1, *Fibre optic interconnecting devices and passive components – Basic test and measurement procedures – Part 3-1: Examinations and measurements – Visual examination*

IEC 61300-3-3, *Fibre optic interconnecting devices and passive components – Basic test and measurement procedures – Part 3-3: Examinations and measurements – Active monitoring of changes in attenuation and return loss*

IEC 61300-3-4, *Fibre optic interconnecting devices and passive components – Basic test and measurement procedures – Part 3-4: Examinations and measurements – Attenuation*

3 General description

The devices under test (DUT) are subjected to a number of successive cycles of engagement and separation. If more than one coupling mechanism is involved, each cycle of engagement shall be conducted with all other mechanisms properly engaged.

4 Apparatus

The apparatus shall include the following elements:

4.1 Fixturing

The device should be tested under normal conditions of use. Where appropriate, suitable clamps, jaws or other means may be used to hold the mating parts of the device in proper alignment during the test.

4.2 Force applicator

Use a means of applying the force or torque to engage and separate the specimen. Unless otherwise stated, the force to engage the device shall be applied manually. Where required, a means of applying the engagement force or torque shall be specified.

4.3 Measuring equipment

Unless otherwise specified, measuring equipment specified in IEC 61300-3-4 shall be connected to the DUT for monitoring the optical performance during the test.

5 Procedure

5.1 Initial inspection

Complete initial examinations and measurements of the specimen as specified in the relevant specification.

5.2 Cycling

Unless otherwise specified in the relevant specification, a cycle shall consist of one normal full engagement and separation of the coupling mechanism to be evaluated. The minimum time between each engagement shall be 3 s.

When the specimen involves more than one coupling mechanism, the cycles shall be conducted with all mechanisms properly engaged. The mating shall be accomplished according to the manufacturer's instructions. In the case of a plug-adaptor-plug configuration, only one plug is subjected to successive engagement and separations cycles, see Figures 1 and 2.

Figure 1 – Mating durability test for a plug-adaptor-plug configuration

Figure 2 – Mating durability test for a plug-socket configuration

5.3 Measurements

5.3.1 General remark

The attenuation and/or return loss of the specimen shall be monitored during the test, as described in IEC 61300-3-3, unless otherwise specified in the relevant specification. The results shall be within the limit given in the specification.

Choose one of the measurement conditions below.

5.3.2 Measurement condition A

Measurements are recorded after every mating. If the value of attenuation or return loss exceeds the specified limit, the measurement should be recorded. The connector may then be cleaned according to the manufacturer's instructions and the test resumed. The cleaning of the connector shall be recorded.

The number of cleaning operations shall be limited to 20 (4 % of matings).

5.3.3 Measurement condition B

The sample population is divided as equally as possible into three specimen groups. Each group is mounted in a holding fixture (e.g. adapter panel) at the following distances from the floor: 0,9 m, 1,4 m and 1,8 m.

For each connector pair, perform an initial cleaning and record baseline optical measurements (e.g. attenuation, return loss). For each connector pair, perform optical measurements on every 25th mating. Clean only the cycled connector prior to every 25th mating. Clean both connectors prior to every 50th mating. The following sequence is an example:

0-1	Cleaning (both sides)
1-1	Engagement
1-2	Separation
2-1	Engagement
2-2	Separation
....	
24-1	Engagement
24-2	Separation
24-3	Cleaning (cycled plug only)
25-1	Engagement
25-2	Measurement
25-3	Separation
....	
49-1	Engagement
49-2	Separation
49-3	Cleaning (both connectors)
50-1	Engagement
50-2	Measurement
50-3	Separation
....	
74-1	Engagement
74-2	Separation
74-3	Cleaning (cycled plug only)
75-1	Engagement
75-2	Measurement
75-3	Separation
....	
199-1	Engagement
199-2	Separation
199-3	Cleaning (both connectors)
200-1	Engagement
200-2	Measurement
200-3	Separation

If, after the specified number of cycles has been reached, and a specimen does not meet the optical criteria after cleaning, then up to two re-cleanings are permitted.

5.3.4 Post test examination

After the test is complete, visually examine the specimens in accordance with IEC 61300-3-1. Check for

- broken or excessively worn parts,
- inability to engage or separate properly,
- damage or wear to seals,
- breakage, chipping or scratching of the interface.

6 Severity

Select the severity level from Table 1.

Table 1 – Severity level

Severity level	Number of cycles
Measurement Condition A	500
Measurement Condition B	200

7 Details to be specified

The following details, as applicable, shall be specified in the detail specification:

- Coupling mechanism to be cycled (if multiple mechanism are involved)
- Initial examinations and measurements during test and performance requirements
- Value of change of attenuation and return loss allowed during the test
- Measurement condition
- Severity level
- Final examinations and measurements and performance requirements
- Deviations from the test procedure
- Additional pass/fail criteria
